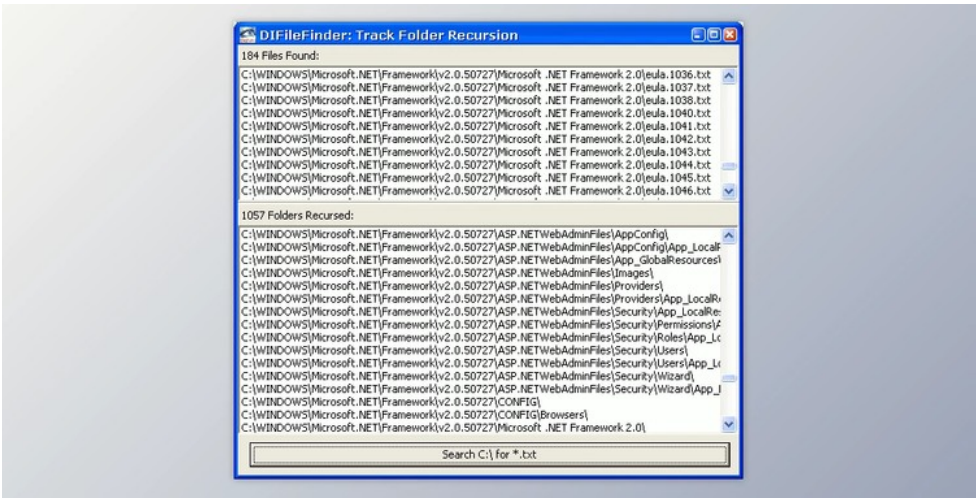
DIFileFinder v6.15.0 (18 Sep 2025) for Delphi 11-13 Florence Full Source

2025-11-09 16:37:34



DIFileFinder is a comprehensive collection of Delphi components designed to efficiently search the file system for files and folders that match specific attributes or name patterns. With support for standard wildcards and full Perl-compatible regular expressions, it offers versatile pattern syntax and allows for inclusion as well as exclusion filters.

What sets **DIFileFinder** apart is its optimized approach to finding files. Unlike typical file finder components that utilize events or build lengthy file lists, **DIFileFinder** reports back to the application one file or folder at a time, by calling the TDIFileFinder.Next method, users can retrieve file entries sequentially, ensuring maximum flexibility with minimal resource

Delphi VCL Components

consumption.

The component provides various search options, including full folder recursion and the ability to skip directories to avoid unnecessary recursion. It offers filters for files, folders, all file attributes (including and excluding), and comprehensive path and file name filters. Additionally, allows for easy customization through descendant components, enabling the implementation of specific filtering mechanisms by overwriting the Validate method.

Key Features of **DIFileFinder** :

1. Collection of Delphi components for efficient file system searches
2. Supports both standard wildcards and full Perl-compatible regular expressions in pattern syntax
3. Includes inclusion and exclusion filters for enhanced flexibility
4. Utilizes an optimized approach to file searching, reporting one file or folder at a time
5. Provides full folder recursion with the option to skip directories as needed
6. Offers filters for files, folders, all file attributes (including and excluding), and comprehensive path and file name filtering
7. Allows for easy customization through descendant components by overriding the Validate method
