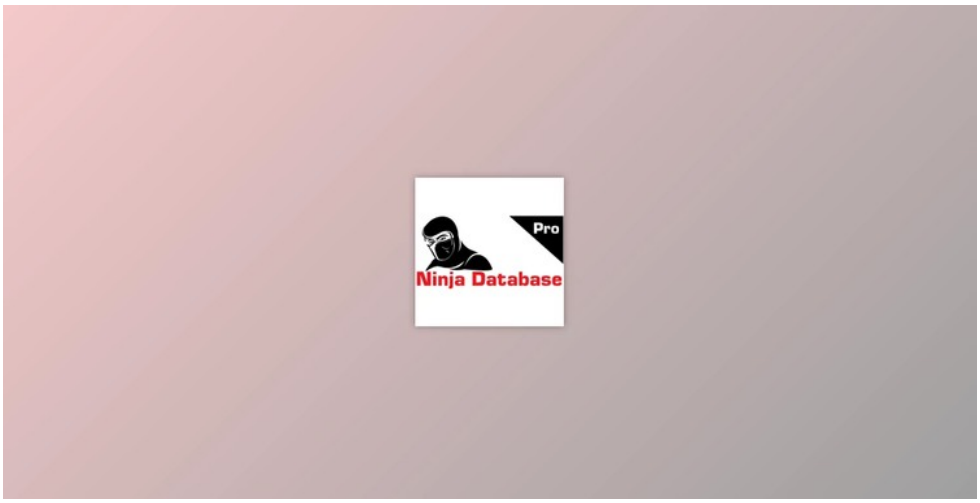
Kellerman Software Ninja .NET Database Pro v3.18 (07 Apr 2022) Retail

2024-12-18 23:04:15



Ninja Database describe to be very good, and it is a lightweight, acid complaint the database and is very fast. It has the ability to been used as a database for the framework of .NET, along with the standard of .NET and a few more like the Android and universal Windows platform. The user has the ability to choose as to how to save the child object as it is embedded or in a separated table. It has the ability to Support the features that the user expects just like the foreign key relationships and a few more. The industry-standard encryption of the AES along with the Mini LZO compression are being included. Ninja Database pro has the ability to save even the complex data structure search as the double linked list along with the dictionaries. The database has the ability to be created even in the memory as well as the isolated storage or event and normal file storage. When the user Compares the ninja database pro to any other database which is available for the user to the surprise of the user it will be seen that the use of the Ninja Database Pro needs less codes compared to others. The source is basically available if the user really desires to know.

Kellerman Software Ninja .NET Database Pro Great Features:

It has the following features and attributes that are stated as below such as:

- It is considered to be very easy to use and it is very user-friendly.
- There are zero configuration. The user has the ability to save the object as well as the table and it has the ability to automatically create and the user object can be saved. Indexes are being automatically maintained and the classes are not needed in order to implement any interface or even a base class.
- A problem occurred while the process of saving is going on a record has the ability to automatically roll back. If the application is losing the power during the transaction process, then it automatically rolled back during the process of next database open. It is advised to make the user application worry free.
- The Ninja Database was basically developed with a test driven development process and almost 560 units as well as 90% of the code coverage was done. Single feature that separate ninja database Pro from the other databases that are present is the advanced dynamic schema evolution. The type of changes is capable of breaking a lot of object databases.
- It permits the user in order to encrypt with the created in that standard encryption of the AES. This process can be overridden with the user's software or even the hardware it is based on encryption.
- The process is considered to be very fast and fully featured for the users and developers.
- It is capable of targeting multiple platforms with the help of the user application with the use of the single API.
- It is considered to be 100% managed code and it is written in the language of C#.
- It has the ability to provide the users with a lifetime technical support via the email services.
