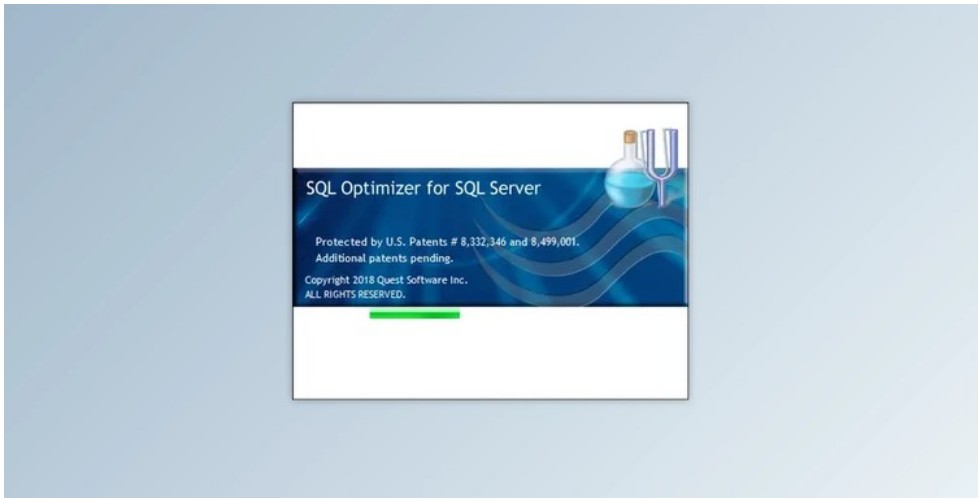
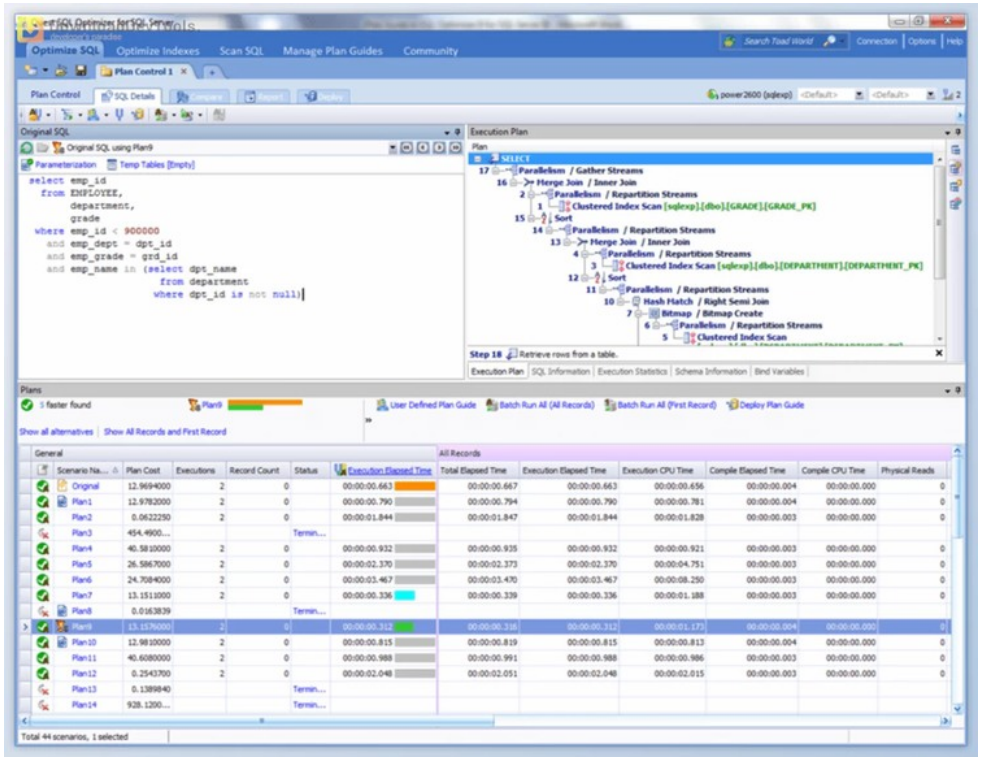
SQL Optimizer for SQL Server v10.1.2.1133

2025-04-13 23:10:14





Quest has robust tools and processes to identify, protect, detect, and remediate vulnerabilities and incidents, utilizing external security partners when necessary. It's important to note that Quest does not use CrowdStrike in any of its operations. Quest's policy is to withhold further technical details unless there is a direct impact on customer data.

is the ultimate solution for improving performance in SQL Server environments. This tool significantly reduces the time needed for tuning and enhances database performance. It allows users to scan SQL statements within database objects, SQL Server Profiler files, and application source code. Additionally, it can generate alternative SQL statements to resolve issues with problematic queries.

Key Features of **SQL Optimizer for SQL Server**:

1. Comprehensive SQL Scanning: Automatically scans SQL statements within database objects, SQL Server Profiler files, and application source code to identify performance issues.
2. SQL Statement Alternatives: Generates multiple alternative SQL statements for problematic queries, helping to find the most efficient execution plan.
3. Performance Tuning: Reduces the time required for database tuning by providing automated recommendations and optimizations.
4. Database Efficiency: Enhances overall database performance by optimizing SQL statements and reducing resource consumption.
5. User-Friendly Interface: An easy-to-use interface allows database administrators and developers to quickly identify and resolve performance bottlenecks.
