ASP.NET Core 6 Blazor Fundamentals - Gill Cleeren

2025-03-27 20:38:48

comprehensively explores Blazor, Microsoft's framework for building robust web applications using C# and HTML within .NET 6. Throughout ASP.NET Core 6 Blazor Fundamentals, participants will gain mastery over the intricacies of Blazor, empowering them to construct full-fledged applications from inception to deployment.

Delving into the fundamentals, learners will first grasp the essence of Blazor and unravel the functionalities of various project files. Subsequently, they will construct a complete application featuring multiple screens, seamless navigation, authentication mechanisms, and data retrieval from remote APIs. The course culminates with insights into deploying the application to an Azure App Service.

Upon completion of **ASP.NET Core 6 Blazor Fundamentals - Gill Cleeren**, participants will possess the requisite skills and knowledge to develop real-world applications using Blazor, equipped with the proficiency to navigate its core functionalities adeptly.

ASP.NET Core 6 Blazor Fundamentals Table of contents:

1. Course Overview (Duration: 2 minutes)
2. Understanding Blazor (Duration: 28 minutes)
3. Creating Your First Blazor Application (Duration: 42 minutes)
4. Working with Blazor Components (Duration: 62 minutes)
5. Using Data from an API (Duration: 52 minutes)
6. Adding Forms and Validation (Duration: 44 minutes)
7. Integrating JavaScript Components (Duration: 25 minutes)
8. Adding Authentication and Authorization (Duration: 28 minutes)
9. Testing Components Using bUnit (Duration: 21 minutes)
10. Sharing Code between Blazor WebAssembly and Blazor Server (Duration: 16 minutes)
11. Deploying Your Blazor Application (Duration: 16 minutes)
