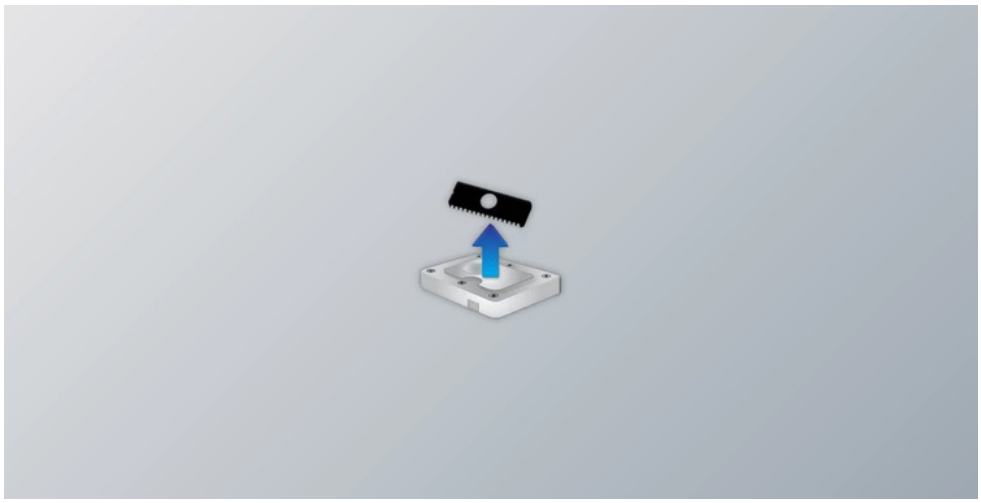
Kellerman Software .NET Caching Library v3.14 (07 Jan 2022) Retail

2024-12-31 14:08:09



.NET Caching Library is described to be the most flexible as well as the caching library which is available for the users and developers. It has to be used in any different type of application basically for the web, mobile, or even any other internet of things. It permits the user and developer in user application to have a memory cache along with the backing cache files, as well of the server of SQL along with the SQLite. The process of backing of the cache works in tandem with the memory and has the ability to load items when it does not even exist in the cached memory. Data which is in the backing cache has ability to be compressed as well as encrypted easily. It is capable of supporting the project types of .NET such as the Mono, Xamarin, iOS, web services, Android, win form, UWP, WPF and a few more to be mentioned. It is also capable of supporting the languages of the .NET such as the VB.NET, along with the C#. It also has the ability to be purchased separately and the product is also being included in the gold suite. The subscribers and the members of the gold suite are capable of receiving all the new upgrades and facilities as a part of the annual subscription.

Kellerman Software .NET Caching Library Great Features:

It has the following features and attributes that are stated as below such as:

- It consists of a family method names. This means that the user is familiar with the runtime checking of the system and the name spaces that are in the framework of .NET and the methods in this case have the same name.
- Objects are hence automatically serialized as well as deserialised to a backing cash with the use of the binary serialization process and in this case there are no serialization attributes required on the user object.
- It has the ability to have an expression for the memory which is default as well as the backing cache. It permits the individuals to set the expiration for each and every cache as well as the items that are saved for each cache.
- It is capable of storing the items of the cache the inner regions including the memory cache for the user and developer.
- It is capable of creating cache keys that are based on the parameters and support the unique reflection which is based on the generation of key.
- It has the ability to support the clearing process of the items of the cache by the region.
- It has the user on cash provided by the process of inheriting from the provider of base cache.
- It provides the users and the developers a royalty-free distribution process.
- Supports and provides a lifetime email technical support to the users and developers free of cost.
- The user has the ability to purchase today and get all the upgrades as a part of the annual subscription.
