FusionCharts Suite XT v3.17.0

2024-12-18 23:02:15

FusionCharts Suite XT is an industry leading JavaScript charting library that provides a unified experience across all browsers and devices. It may render over 90 graphs and indicators in JavaScript (HTML5), together with info maps. Its interactive features such as tool-tips, clickable legend keys, drill-downs, zooming, and scrolling allow a rich user experience to the data-driven applications. FusionCharts Suite XT functions nicely with XML and JSON data, and can be readily integrated using any JavaScript frame or even a server-side technology e.g., ASP.NET, PHP, Python, Java, Ruby on Rails, etc... FusionCharts Suite XT comes packed with extensive docs, ready-to-use small business demos and code samples that enable you to make your very first graph in under 15 minutes. 21,000 clients and 450,000 programmers in 118 nations utilize FusionCharts Suite XT.

FusionCharts supplies over 100+ graphs and 2000+ maps. With extensive documentation, a consistent API, along a selection of customization choices - FusionCharts is the most comprehensive JavaScript charting library that's adored by 750,000 programmers throughout the world. FusionCharts Suite XT comprises FusionCharts XT, FusionWidgets XT, PowerCharts XT, and FusionMaps XT.

FusionCharts XT is the flagship product composed of 50+ graph types such as Line, Area, Column, Bar, and much more. Perfect addition for your own reports, dashboards, surveys, analytics, and monitors. Click on a graph to view it in action.

FusionCharts XT - an ideal addition to your accounts, dashboards, surveys, analytics, and monitors. Its extensive selection of graph types with intelligent reporting capacities, animations, and interactivity are certain to make your programs look magnificent and power-packed. Leveraging the power of JavaScript (HTML5), FusionCharts XT works effortlessly on PCs, Macs, iPods, iPhones, along with the vast majority of other cellular devices. It works with JSON and XML information and will integrate with almost any server-side technology (ASP.NET, PHP, Python, Java, Ruby on Rails, etc.) and the database you use. Together with the extensive respectful and documentation demos it provides, you'll need only 15 minutes to make your very first graph and reach your initial"wow" moment.

FusionWidgets XT - an ideal addition to all of your executive dashboards, live"up-to-the-second" stock screens, process tracking software, and financial programs in which KPI's and other crucial information are tracked in real-time. It brings to you the joint experience of developers and data visualizers at a set of exceptionally easy-to-use controls. Leveraging JavaScript (HTML5), FusionWidgets XT works effortlessly on PCs, Macs, iPods, iPhones, along with the vast majority of other cellular devices.

PowerCharts XT - a pair of innovative chart types for domain-specific use like system diagrams, stock graphs, what-if evaluation, hierarchical structures etc... The graphs allow for visual data mining through interactive components, enabling you to bring a rich, immersive experience for your programs easily. A range of those graphs is editable, too, so that you may rely on them to plot what-if situations, and the edited value could be filed back to the host. The graphs can be left in JavaScript (HTML5) and operate across all platforms and devices, including tablets and smartphones.

FusionMaps XT - screen geographic data dispersed by class, entities or regions utilizing JavaScript (HTML5). You may use it to plot company data like earnings by areas, census information like people by country, election outcomes, flight paths, office locations, and poll outcomes efficiently. FusionMaps XT provides over 965 maps, for example, all continents, leading states, and all US states. The maps are driven by XML data source, and you can incorporate them together with almost any web technology (ASP.NET, PHP, Python, Java, Ruby on Rails, etc.) and database. You can establish a map in a few moments and then broadly customize it with the XML/JSON API that they exhibit. FusionMaps XT also has a visual map builder that can help you enter information and place all of this map's configurations.

FusionTime (Beta) - Plot high-performance time-series visualizations. FusionTime makes it possible to picture time-series and stock information in JavaScript, with merely a couple of code lines. When it is an easy time-series chart, stock chart, tens of thousands of data points in a graph, or perhaps complicated multivariate analysis, it is possible to leave all them with

Other Web & Script

exactly the identical ease-of-use. You receive out-of-the-box interactivity like time navigator, date range selectors, tooltips with crosslines, interactive legend, and a whole lot more. Additionally, you can plot your information as the column, line, area, candlestick, OHLC, as well as variations like piled column & place, and overlay them with data and event markers. The identical graph runs across desktop computers, tablet computers, and mobile, through reactive designs, on all browsers - with no extra effort on your side.

Benefits of Utilizing FusionCharts Suite XT

With FusionCharts Suite XT, you may efficiently render beautiful graphs for your users.

Precisely the same pleasure across devices, platforms, and browsers

PCs, Macs, iPads, iPhones, or mobile apparatus - FusionCharts Suite XT brings exactly the identical pleasure to every one of them. It functions with your internet and mobile applications, left in just a browser, such as even IE6. Who says the internet is fragmented?

The industry's most comprehensive charting library with over 90 chart kinds

Why utilize a column graph when a funnel graph is exactly what you want? Incorrect graph types result in erroneous analysis, which consequently leads to erroneous business decisions. Your customers deserve much better. FusionCharts Suite XT brings you 90 graph types right in the fundamental Column, Line, Pie, and Speedometer graphs to the more sophisticated Funnel, Pyramid, Pareto, and Zoom Line Charts.

Rich interactivity, strong reporting, joyful customers

Tooltips, clickable legend keys, simple drill-down, simple zooming and zooming, simple graph export and export provides your users with all of the capabilities they expect out of a modern-day small business program.

Charts in both 2D and 3D

depending upon your customers' preference, you may either go glam with 3D graphs or keep straightforward yet elegant with all the 2D graphs.

Select a data format which suits you personally -- JSON or XML

FusionCharts Suite XT supports both JSON and XML data formats. So once you're incorporating the graphs along with other JavaScript frameworks, JSON is a perfect option. When you're working with server-side small business applications, XML gets more suitable with its verbose character.

Automated export to JPG, PNG, and PDF

Establishing a data portal or company monitoring dashboard? Certainly, your customers want to export the graphs for their demonstrations or mails. Permit export to JPG, PNG, and PDF programmatically or via user interaction.

Native integration using jQuery

employing the newest FusionCharts jQuery plugin, you may use the jQuery syntax to construct the charts. Insert a graph anywhere within a web page, change the graph type, update and recover chart data, upgrade cosmetic and functional settings, and a whole lot more.
