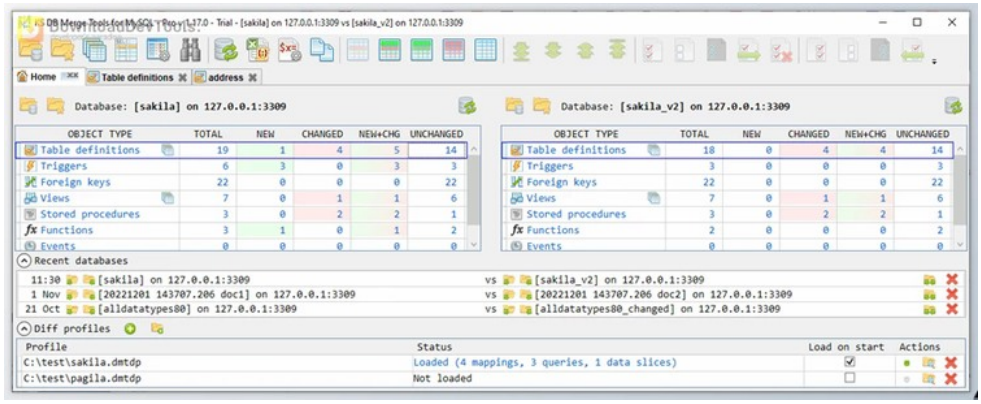
KS DB Merge Tools for MySQL v1.27.1

2026-07-01 09:00:48



The provides users with an effortless method to compare and merge MySQL and MariaDB databases. The tool enables quick difference detection and rapid change synchronization for schema and actual data in your database. It provides time-efficient operations and automatic protection from routine mistakes in database management.

Users can contact KS DB Merge Tools through its Windows graphical user interface and execute it through command-line functions for both Windows and Linux. The tool enables comparisons between tables and views, in addition to stored procedures and triggers, and supports custom query comparison. **KS DB Merge Tools for MySQL** lets you perform change merges between any database direction when staging from prod to dev or vice versa. You can limit data comparison when using filters or "slices" in this tool for selective evaluation.

Key Features of **KS DB Merge Tools for MySQL** :

1. **Schema Comparison:** Find differences in database structure, including tables, columns, indexes, triggers, views, stored procedures, and more.
2. **Data Comparison:** Compare data between tables, views, or even custom queries. Merge changes if the destination can be updated.
3. **Two-Way Merge:** Sync updates in either direction—great for keeping development, staging, and production databases in sync.
4. **Batch Comparison:** Run data comparisons across multiple tables or views at once. Define custom rules and mappings if needed.
5. **Data Slices:** Focus on specific parts of your data for comparison, such as a single column, range, or condition-based selection.
6. **Command-Line Support:** Automate database comparison and merging using scripts on Windows or Linux.
7. **Script Editor GUI:** A helpful visual tool to create and manage your command-line scripts without needing deep technical knowledge.
8. **Lightweight & Fast:** Designed to be efficient without bloated features—just what you need to get the job done.
