WebScraper v4.15.6 for macOS

2025-01-28 09:47:34

WebScraper uses the Integrity engine to scan a website and can output extracted data (currently) as CSV or JSON.

Making data extraction on the internet simple and accessible to all.

We aim to make data from web extraction as easy as it is. You can set up the scraper by simply clicking and pointing at elements. There is no need to code.

Web Scraper can extract data from websites with different kinds of levels. It is able to navigate websites at all levels.

- Subcategories and categories
- Pagination
- Product pages

The modern web is built on JavaScript frameworks, which make user interfaces simpler. However, they aren't as available to scrapers. Web Scraper solves this by:

- Full JavaScript execution
- In the midst of waiting for Ajax's requests
- Pagination handlers
- Page scroll down

Web Scraper lets you create Site Maps from different types of selectors. This makes it possible to adapt data extraction to various site structures.

Create scrapers, scrape websites, and export data to CSV through your browser. Utilize Web Scraper Cloud to export data in CSV, XLSX, and JSON formats. Access it through API webhooks and API or export it via Dropbox, Google Sheets, or Amazon S3.
