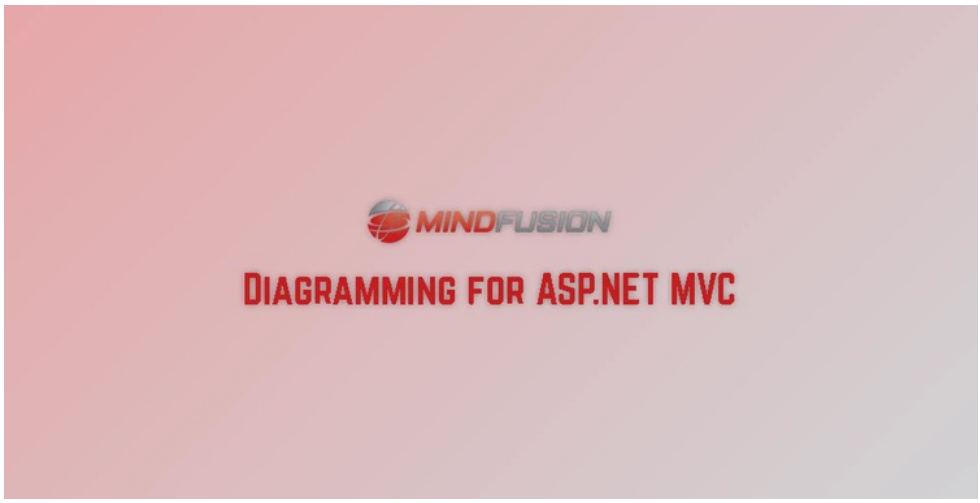
MindFusion Diagramming for ASP.NET MVC v3.2.2

2024-12-31 16:29:10



MindFusion Diagramming for ASP.NET MVC supplies a large assortment of features for customizing and creating diagrams, flowcharts, trees, charts, and hierarchies. The controller supports several options for correcting the overall look of your diagram. Nodes can exhibit both text and graphics along with the font size and color may be customized. Additionally, it includes over a hundred predefined shapes.

THE PERFECT TOOL to construct any sort of DIAGRAM IN ASP.NET MVC Powerful, yet simple to implement and application, MindFusion MVC Diagram is the perfect option for internet applications that use the ASP.NET MVC platform and also require data visualization.

MindFusion Diagramming to ASP.NET MVC adds to applications the ability to produce and current flowchart and process diagrams, workflow and information flow graphs, database entity-relationship diagrams, organizational and classification charts, hierarchy and relationship diagrams, networks, charts, trees, and much more.

The simple diagram elements - shapes, tables, links, and containers - can be grouped and attached to form complex structures. The control offers many predefined shapes and also the capability to specify custom made ones. The components can exhibit rich content, such as formatted text and graphics. The look can be customized via a flexible styling program, node impacts, and lots of built-in motifs.

The controller provides a comprehensive selection of automatic design calculations, such as Spring-Embedder, Grid, Annealing, Circular, Orthogonal, Topological, Cascade, Triangular, Layered, FlowChart, Workflow, Hierarchical, along with several Tree layouts.
