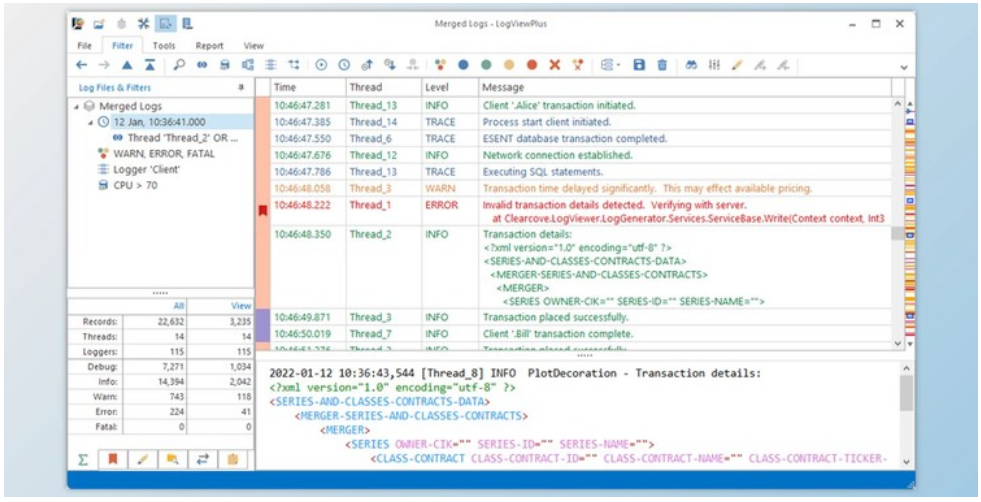
LogViewPlus v3.1.18 (17 Dec 2024)

2024-12-31 13:49:56



LogViewPlus is a powerful tool designed for efficient log file analysis, offering both quick and detailed insights into your data. It simplifies the process of parsing log entries, enabling seamless search, merge, reporting, and more. By automatically generating parsers or allowing easy configuration of custom ones, it ensures accurate interpretation of log files. With filtering capabilities surpassing standard text-based searches, enables complex criteria matching for enhanced analysis.

Saving analyses for archival or sharing purposes is simple, facilitating collaboration and issue-tracking integration. The tool provides versatile access to log data, including remote file systems and various data sources, ensuring seamless monitoring and retrieval of new entries.

With built-in support for Windows Event Logs, syslog messages, and UDP messages, **LogViewPlus** covers a wide range of logging standards. Moreover, its SQL query support empowers users to transform raw data into actionable insights, with features like CPU and Memory Usage tracking and visual dashboards. By converting log data into informative reports, **LogViewPlus** streamlines the understanding and navigating of complex datasets, facilitating focused analysis.

Key Features of **LogViewPlus**:

1. On-demand parsing for quick and clear log analysis
2. Automatic or customizable log file parsing for detailed insights
3. Filtering and searching capabilities for precise data retrieval
4. Ability to save analyses for archiving or sharing
5. Support for reading log data from various sources, including remote files, databases, Windows Event Logs, syslog messages, and UDP messages
6. Database access via OLEDB connection to platforms like Microsoft SQL Server, Oracle, MySQL, PostgreSQL, and SQLite
7. Real-time tracking and monitoring of remote data sources

所有软件资源 100%安全 已检测 无病毒 无篡改
