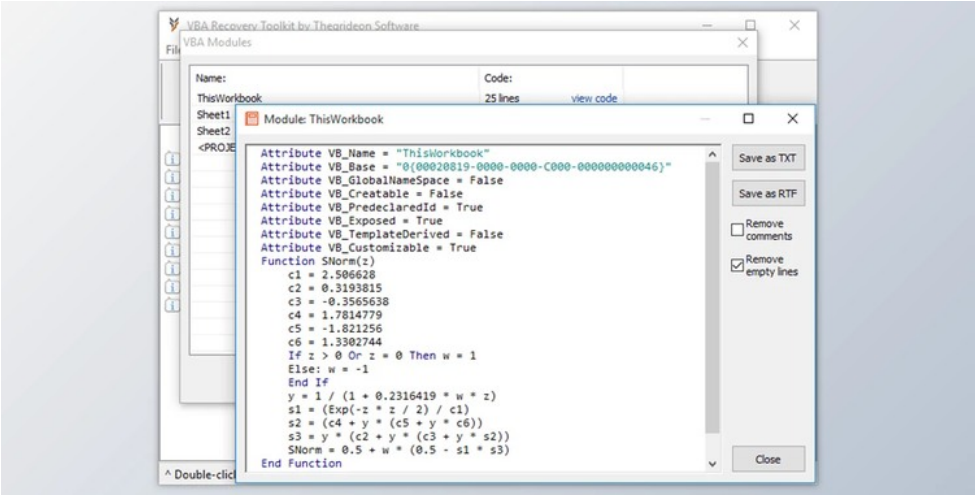
VBA Recovery Toolkit v6.1

2025-02-22 22:09:51



VBA Recovery Toolkit is a helpful instrument for your computer users who should open a document that has secure VBA code. The VBA (Visual Basic for Applications) modules are employed in several Microsoft Office files to automate specific actions or boost their use.

Should you work on several jobs, you can occasionally overlook the password used to shield the VBA code from being seen by unauthorized users. If you have to make adjustments to the code and you don't have an unprotected copy of the document, this program may be convenient.

The program features a simple to use interface that permits you to pick the file you would like to start and see the prospective error messages. You don't need to become a programmer or to have any prior knowledge in programming or VBA editing.

Unlike other programs that alter the content of this password record using a new price, this application aims to enable you to get the code without any alterations to the file. The approach allows you to alter only the internal documents, which leaves the document intact. You may opt to alter the material or see the VBA code.

As it deals with all the VBA IDE rather than the document itself, this skip method may be applied to numerous formats. Therefore, it may be useful for those users who handle Microsoft Office files, AutoCAD drawings, or alternative VBA-enabled files...

The program plans to assist you with other security measures like locked or concealed VBA jobs by draining the VBA IDE settings, which keep you from seeing the code. You have to be certain you load the document by using the VBA Recovery Toolkit conversation.

The program successfully showed the VBA code in password-protected Office files by immediately opening the document in our evaluations. It's a practical tool that may enable you to get the code supporting macros and other VBA jobs.

VBA Recovery Toolkit from Thegrideon Software is an exceptional tool to help in VBA (Visual Basic for Applications) undo engendering: Document job settings, reset job preferences, regain and preview origin code, find potentially harmful hidden modules, and much more. . .It functions with VBA Projects in MS Office [Access, Excel, PowerPoint, Visio, Word,...], AutoCAD, CorelDRAW, Photo-PAINT, SolidWorks,...
