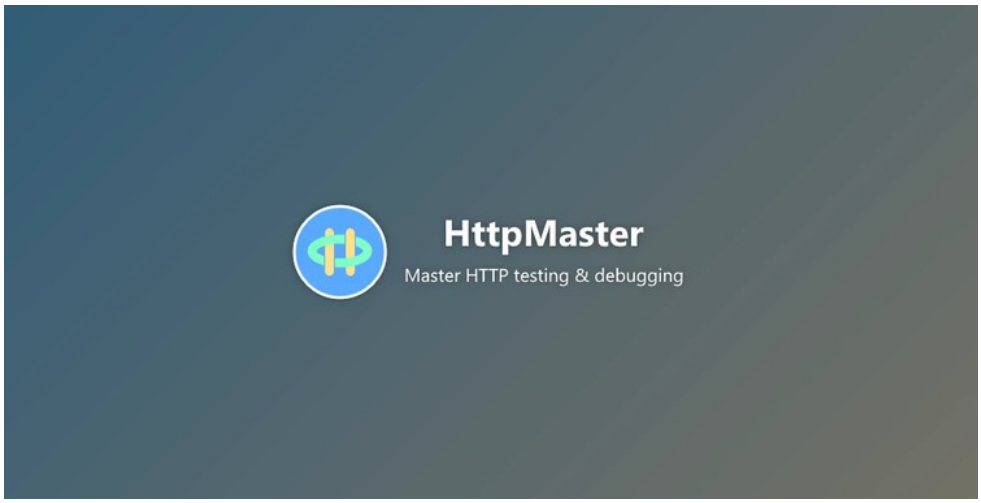
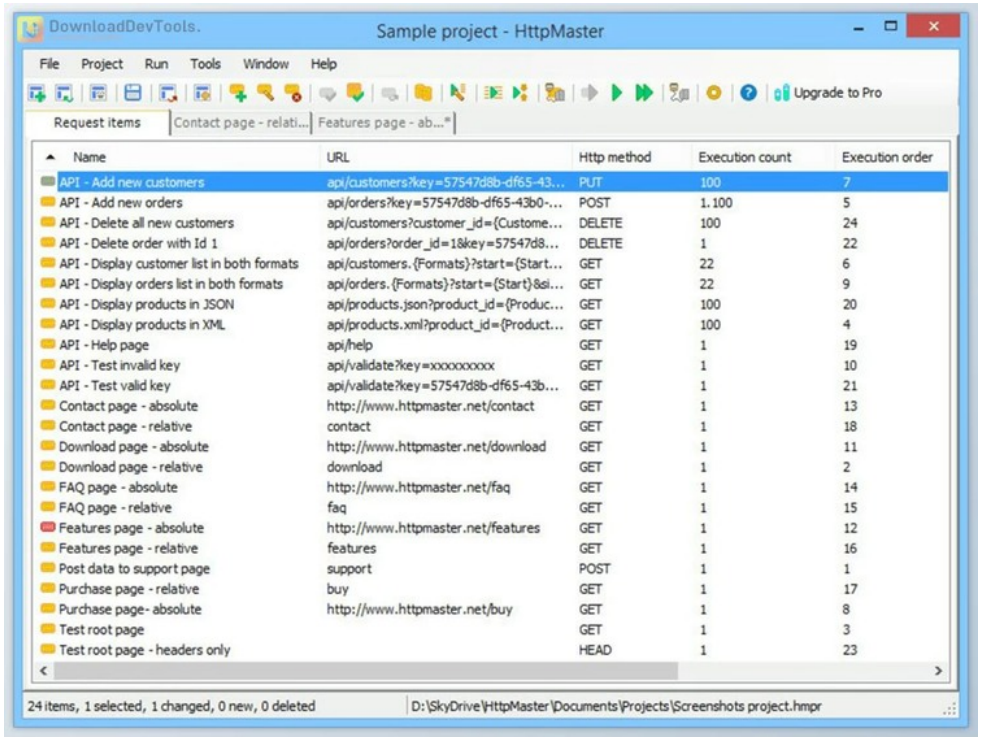
HttpMaster Pro v5.9.3 (06 Jan 2024) + Potable Edition

2024-12-29 12:40:32





HttpMaster Pro is a versatile HTTP testing tool designed for developers, testers, and quality assurance professionals to efficiently test various web applications and services. With a broad feature set and advanced support for web APIs and RESTful services, it offers a comprehensive solution for testing any type of web application. Its lightweight and efficient design ensures resource efficiency, with a clean and responsive user interface making it easy to navigate and utilize.

The tool's standout features include request chaining for automating workflows, response data validation with customizable rules, and the ability to specify global parameters for data reuse across multiple requests. It also provides extensive data upload support and powerful execution capabilities, allowing users to monitor progress and pause/resume execution as needed. Additionally, **HttpMaster Pro** offers authentication and authorization support, web application load testing, and a command-line interface for automation.

With both a free Express Edition and a Professional Edition available, caters to a wide range of users, offering a lifetime license with no upgrade costs for the Professional Edition. Its intuitive test management tools, codeless tests, and concise documentation make it practical and easy to use, while its standalone nature ensures privacy and security for users, with all features fully functional offline. Overall, **HttpMaster Pro** empowers users to thoroughly test and optimize their web applications and services, enhancing efficiency and productivity in the development process.

Key Features of **HttpMaster Pro**:

1. Advanced support for testing web APIs and RESTful web services
2. Intuitive test management tools

Tools Applications

3. Completely codeless tests
4. Tips and wizards for easy navigation
5. Concise documentation for quick reference
6. Lightweight installation size
7. Clean and responsive user interface
8. Standalone operation with no account required
9. No reliance on cloud communication or storage
10. Request chaining for automating REST API workflows
11. Response data validation with customizable rules
12. The standard collection of REST methods
13. Global parameters for data reuse across requests
14. Multi-value parameters for testing with data variations
15. Comprehensive data upload support for HTML forms and file uploads
16. Request data builder for accelerating form-building
17. Powerful execution capabilities with progress monitoring
18. Response data viewers for XML, JSON, HTML, CSS, and more
19. Execution groups and conditional execution for advanced scenarios
20. Authentication and authorization support
21. Web application load testing capabilities
22. Command-line interface for automation
23. OpenAPI import for easy project creation
24. Curl command preparation from project request items
