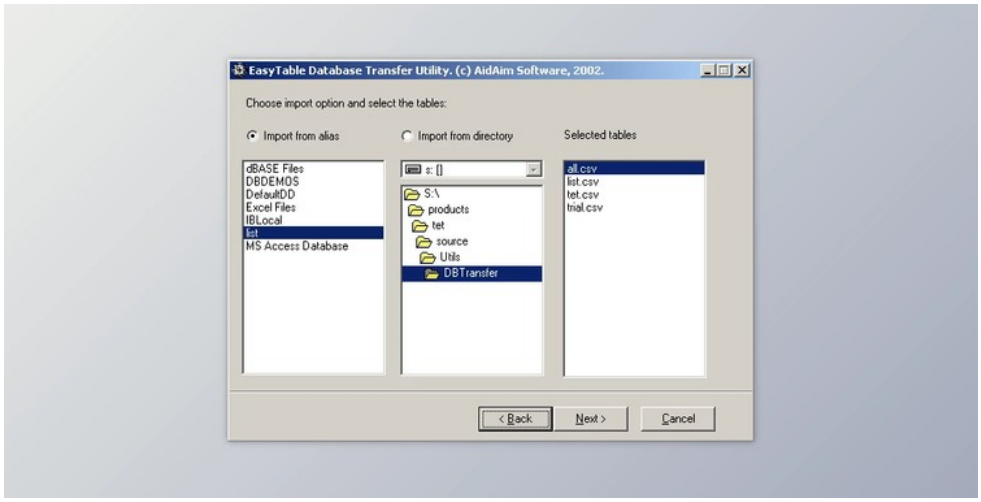
AidAim EasyTable v14.0 for D4-D10.2 Tokyo

2025-01-27 09:35:46



Distribute your application with EasyTable and forget Borland Database Engine (BDE).

EasyTable is a compact yet powerful, extremely fast, reliable, and easy-to-use BDE option single-file embedded database for Delphi and C++ Builder.

With EasyTable, you don't need special installation and configuration; it compiles right into your .EXE file. The wonderful advantage of EasyTable compared to other database systems is that it allows the integration of a database file into the application executable file.

EasyTable includes the TEasySession component that allows to use it in a multithreaded environment, including web server applications.

TEasyQuery part offers a strong subset of SQL'92 (DDL and DML) commands.

Make your application faster and more flexible using the EasyTable BDE replacement Delphi database.

AidAim EasyTable Great Features:

- No BDE; no DLLs
- SQL'92 (DML & DDL) support
- Complete source code contained
- Unmatched ease-of-use
- Small footprint
- Storing multiple tables inside the single database file
- Totally compatible with regular DB-aware controllers
- Encryption, BLOB data compression
- The capability of database embedding inside the executable file
- ODBC Driver
- Multi-thread accessibility
