

Mustangpeak ListView v2025.03 for Delphi 10.1-12 Athens Full Source

2025-04-15 17:51:10

This Turbopak Mustangpeak library that works with Delphi or C++Builder was created by Jim Kueneman and contained the EasyListView and the VirutalShellExplorer components. Its Mustangpeak EasyListView is a speedy and flexible replacement for TListView, and it is also integrated into conjunction with the VirtualShellTools component of the MustangPeak Library.

This is a release that is only available as a source of Mustangpeak EasyListView. It comes with runtime and design-time applications that work with Delphi and CBuilder and is compatible with Win32 and Win64.

TurboPack MustangpeakEasyListview is part of VirtualShellTools for the Listview but can be used for a TListView Replacement that is faster and more customizable. This is a source-only release of TurboPack MustangpeakEasyListView.

Package names

MustangpeakEasyListView package names have the following form:

- EasyListviewD.dpk (Delphi runtime package)
- EasyListviewDD.dpk (Delphi design-time package)
- EasyListviewC.bpl (C++Builder Runtime for all platforms)
- EasyListviewCD.bpl (C++Builder Runtime for the VCL)

RAD STUDIO Berlin or later supported.
