Devart MCP Server Universal v1.0.0 (20 May 2026)

2026-07-01 10:33:58

Devart MCP Server Universal allows securely and practically integrating AI tools into the database or cloud services. You don't have to export data, write custom integrations, or switch between systems; AI assistants can interact with your real business data via a server that runs in your environment.

This solution allows for more direct and intelligent access to data for tools such as Claude, Visual Studio Code, Cursor, Codex, and other platforms ready for MCP. Ask questions naturally, obtain valuable information, analyze data, generate reports, and search records much faster than using traditional manual processes.

Devart MCP Server Universal is optimized for quick setup, secure deployment, and reliable connectivity. It's convenient for self-service analytics, customer support, database development, reporting, and general data exploration. It ensures that users can access the data within their infrastructure while maintaining control and security, allowing teams to leverage AI with critical business data more effectively.

Key Features of **Devart MCP Server Universal**:

1. **Secure AI access to data** — Connect AI tools to databases and cloud services while keeping access controlled.
2. **Self-hosted deployment** — Run the server inside your own environment to protect sensitive business data.
3. **Fast setup** — Get started quickly without building a custom MCP integration from scratch.
4. **Natural language data interaction** — Ask questions in plain language and get useful data-driven answers.
5. **No manual exports required** — Reduce repetitive exports, manual reporting, and extra technical work.
6. **Popular AI tool compatibility** — Works with Claude, VS Code, Cursor, Codex, and other MCP-ready tools.
7. **Reliable connectivity** — Built on Devart's experience in database and cloud data access.
8. **Analytics and reporting support** — Create quick reports and answer business questions faster.
9. **Support team assistance** — Check orders, invoices, subscriptions, and customer records more easily.
10. **Flexible delivery options** — Use prebuilt binaries, GitHub, or NuGet-based distribution.
