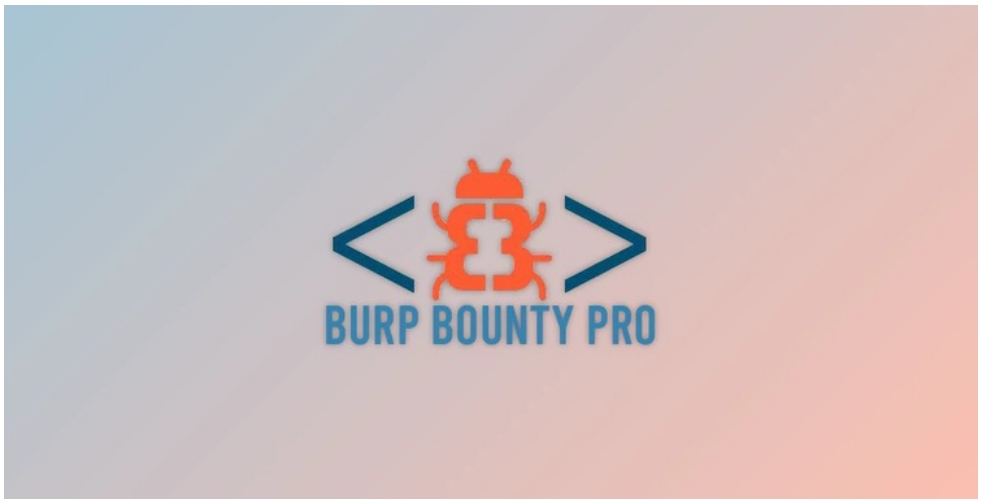
Burp Bounty Pro v2.5.0

2024-12-29 12:30:55



A Burp Bounty Pro is a Burpsuite Pro extension that enhances the passive and active scanner through the use of custom rules that are easily understood through a visual interface. Through a sophisticated search for patterns and an improvement in the payload that is sent and received, we can build our vulnerability profiles for the active scan and the passive. On the other side, it can simulate a pentest manual to maximize efficiency without having to make unnecessary requests. It examines targets for only those potentially vulnerable parameters using the most efficient payloads. In contrast, it can function as a traditional vulnerability scanner, allowing you to include your vulnerability profiles or even add your payloads into the already existing profiles. The extension also assists you in obtaining valuable data during the pentest manual that includes possible vulnerable parameters, detection of versions, and other information.

Burp Bounty Pro Great Features:

- **Quick Issues Information:**
  If Burp Bounty Pro detects one vulnerability, you'll be informed at the time of the vulnerability.
- **Basic Pack of Profiles**
  Profiles were created to serve as an example, to help people understand how they work and create their profiles.
- **A new pack of profile profiles**
  Advanced profiles designed to identify the presence of real-world vulnerabilities in web-based applications.
- Updates and new profiles with advanced features
- Updates to the extension that fix issues
- Updates the extension with brand new features
- Active Profiles
- Passive Requires Profiles
- Profiles for Passive Response
