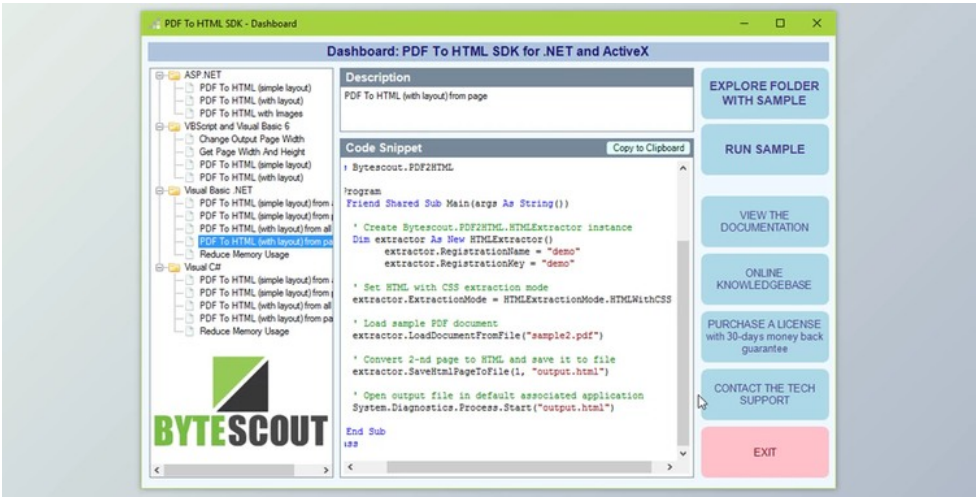
Bytescout PDF To HTML SDK v13.4.1.4759 (14 Jul 2023)

2024-12-29 12:26:26



Bytescout PDF To HTML SDK converts PDF into HTML with no extra software required.

Bytescout PDF To HTML SDK comprises a range of programming elements meant to be used by application developers who want to create programs that provide PDF to HTML conversion capabilities without relying upon third-party applications.

The development kit may be used together with the .NET Framework in desktop software and ASP.NET in the net software. Support for heritage programming languages (Visual Basic 6 or elderly Delphi variants) is provided through an ActiveX interface.

Bytescout PDF To HTML SDK performs conversions from PDF into HTML while still keeping up the design drawings and images located in the source files undamaged. Vector images are also saved, along the program relies on the exact positioning of text and graphics to guarantee the original PDF document is replicated accurately.

Code samples for Visual C#, Visual Basic .NET, ASP .NET, Visual Basic 6, and VBScript are contained in the downloadable package, together with a technical utility that allows you to observe the code snippets, copy them into the clipboard and run the examples.

Furthermore, a GUI demonstration may be seen with the support of a bundled program, ByteScout PDF Multitool. This sample gives you a fantastic idea of how the available functions can be incorporated into a product's UI.

- Converts PDF to HTML C# with the design maintained;
- Text, fonts, pictures, tables are maintained;
- Vector images are maintained (background graphics);
- Precise placement of text and graphics to replicate the first PDF document when working together with c# switching from PDF into HTML;
- Works offline with no Internet connection needed;
- It doesn't need Adobe Reader or some other 3rd applications to be set up;
- Works using .NET 2.00, 3.5, 4.00 in desktop software -- may convert PDF into HTML. NET;
- Works with ASP.NET 2.00, 3.5, 4.00 in web-applications;
- Offers accessibility through an ActiveX interface to be used by legacy programming languages (Visual Basic 6, older versions of Delphi) and scripting (VBScript and many others).
