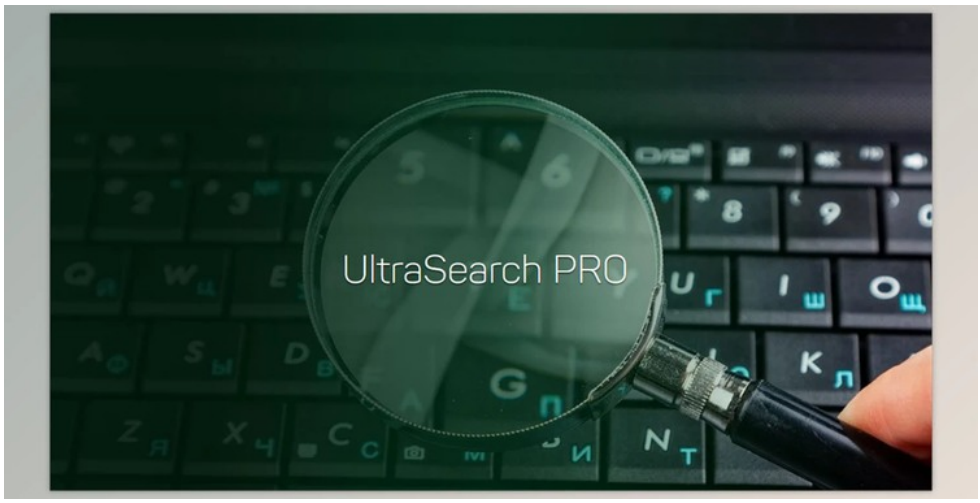
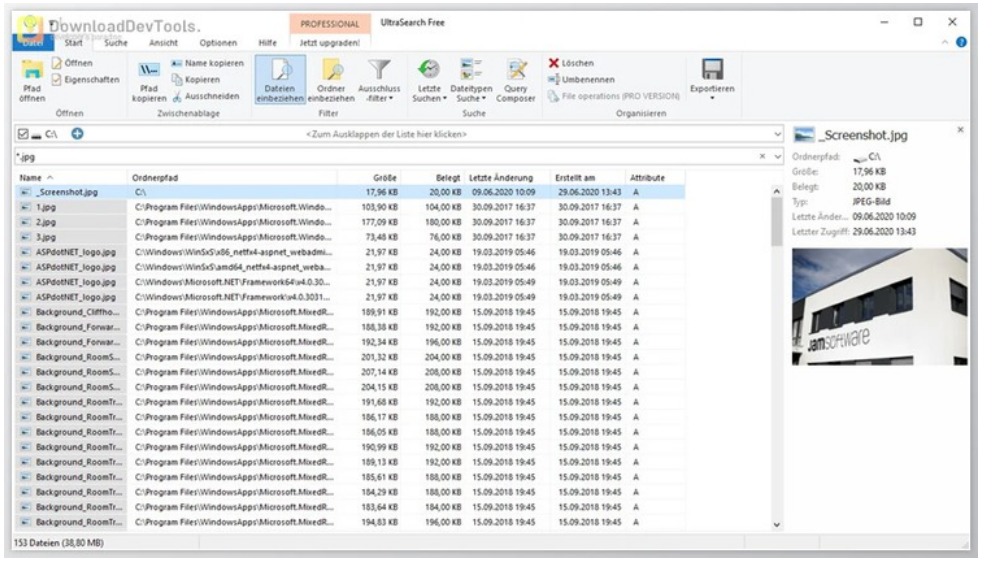
# UltraSearch Pro v4.9.1.1204 for Win x64 Multilingual

2026-03-16 23:27:33





**UltraSearch Pro** is a reliable and efficient software crafted for swift file location on NTFS hard drives, allowing users to customize search criteria. With the capability to find files in real-time, users can search by document content, file type, or properties, whether on a corporate network or a personal PC.

This tool swiftly identifies relevant files by utilizing the Master File Table (MFT) specific to the NTFS system, bypassing the need for drive indexing, which often consumes significant time in similar applications. This results in a substantial reduction in the time users spend searching for specific files. The program boasts a user-friendly interface, ensuring accessibility for a diverse audience.

Users can employ keywords, wildcards, and regular expressions for searches by selecting the desired drive(s) and entering the keywords. The search operation can be further refined by specifying exclusions based on wildcards, regular expressions, or full names.

By default, the application excludes the Recycle Bin and the System Volume Information, a configuration recommended for optimal performance. The search results can be saved and sorted based on criteria such as name, path, size, file type, and date changed, either in ascending or descending order.

Additional features include creating a context menu shortcut for convenient access, automated checks for new drives, and skipping User Account Control warnings. offers a comprehensive solution for efficient and customizable file searches, enhancing user productivity.

## Key Features of **UltraSearch Pro**:

1. **Rapid and Efficient File Search:**
    - Quickly locate files on local drives, network drives, and synchronized cloud storage like SharePoint.
    - Search file content in various formats, including Word, PDF, and source code.
    - Identify standard files, system files, and files with custom extensions.
2. **Search Business Storages:**

所有软件资源 100%安全 已检测 无病毒 无篡改

Applications Tools

- Simultaneously search local drives, network drives, USB sticks, SD cards, and more.
- Conduct searches in Windows domains and on Windows servers.

3. **Search Customization:**
   - Link search terms using 'AND' or 'OR'.
   - Employ search syntax with wildcards and regular expressions.
   - Use keywords for searching file contents, file groups, and file extensions.
   - Save and reload searches with all configured settings.
4. **Filter and Narrow Search:**
   - Limit searches based on the creation and modification dates of files.
   - Set minimum and maximum file sizes.
   - Easily exclude files, folders, or file types with flexible exclusion filters.
5. **File Management and Operations:**
   - Rename multiple files and folders simultaneously.
   - Move files across different folders and drives concurrently.
   - Implement clever replacement rules for existing files during moves or copies.
   - Copy and move files along with their file permissions.
   - Pass search results as parameters to a program or script.
6. **Export Results:**
   - Export search results in various formats such as Excel, PDF, HTML, text, or CSV files.
   - Copy all file names, file paths, or the complete results list to the clipboard.
   - Log file operations for reference.
