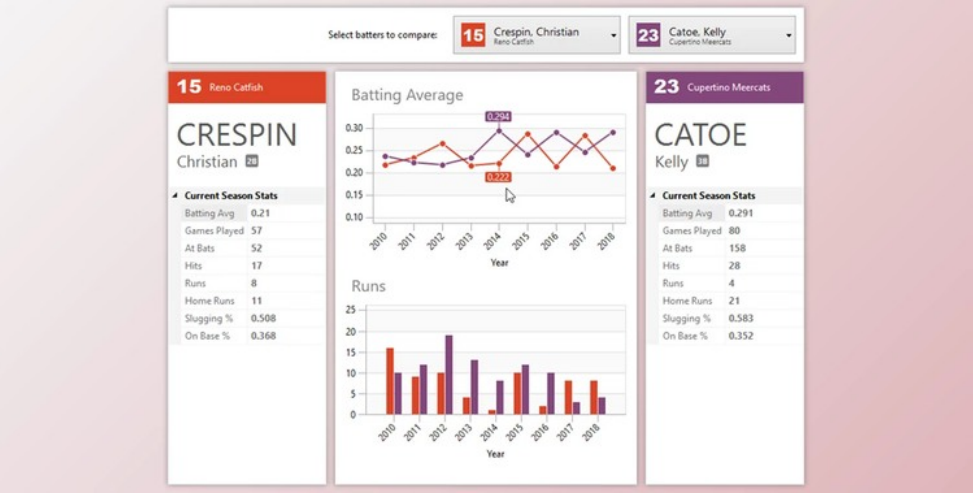
Actipro Software Silverlight Controls v2018.1 build 0233 (02 Oct 2019) Retail

2026-09-02 21:32:11



It is a syntax highlighting code editor which has the ability to control as well as parse the suite. It has the ability to bring a very powerful visual studio just like the code editing experience to the user and developer application. The syntax language for most of the popular languages is available or even the custom built for the user in order to handle the language proprietary.

It is all about the highlighting of the styles and that can be completely customized by the developer and the end-user for the language of code. The syntax editor has the ability to come along with the highlighting of the syntax which is president for more than 25 languages.

The parsers are capable of running in a worker thread and they are able to perform the syntax analyzes on the text. They are capable of outputting an AST as well as a reports syntax which can be shown has a wave line for the developer in the editor.

The end user has the ability to collapse at the ranges of the text that are defined by the language and a small adornment as the ability to represent the text which has been collapsed and it has the ability to show the text which is contained.

It is a feature which is capable of aiding the end user which is capable of supporting the code compilation process and also has the ability to provide contextually a very information write about the code which is surrounding.

Premium editing of the syntax as well as the language add-on

There are a lot of premium add-on for the editor of the Silverlight which has the ability to implement with the feature just like the parsing outlining of the code, syntax error reporting and finally Intelliprompt and so on.

There are a lot of types of charts that are supported right from the basic line as well as the bar chart to the area of the chart which is stacked. The chart has the ability to control as well and include a number of useful features just like the multiple series, labels, legend as customizable pallets. It is considered to be easily conveying the data from a single or even and multiple sources in a single chart in order to save the space as well as engage the users and developers.

it is considered to be small church that are also called spark lines and they are designed in order to visualize the data which is complex in nature. The Sparkline chart has the ability to control as well as includes a lot of useful features just like the multiple series, take as well as hot tracking, customizable palette and also the aggregation of the data. Basically everything that the user desires and requires in order to create and enhanced compact data and in order to display it is present.

The dialog of the wizard has the ability to simplify the experience of the user as well as the application by the process of taking a complex task and also break into a series of steps that are simpler. Actipro Wizard is basically a lightweight control for the creation of the wizard dialog the while the process of confirming to the standard of the specification takes place.

The product has the ability to include a board control of task along with the reorder able column as well as cards for organizing the task visually. There is a book control that has the ability to render the content as a page which is present in the book as well as a number of panels that are capable of supporting the fluid animation as well as the child element.

The user has the ability to select from the different prebuild symbolizes and also has the ability to indicate the value in order to encode. The barcode has the ability to automatically calculate any checksums which is appropriate as well as the capability to generate the resulting bar as well as the code visual for the user and developer.

The library is basically including animated transitions that are between the different content elements, as well as the drop shadow, context menu the buttons of the pop-up.
