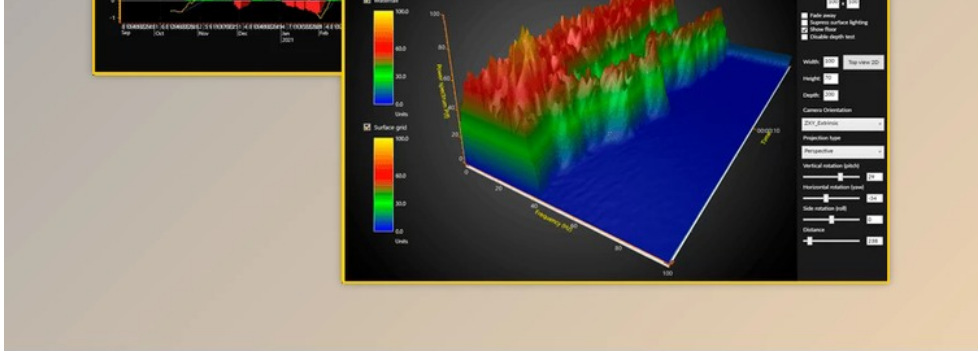
Components .Net Winforms



Arction LightningChart for .Net stands as a pinnacle in high-performance charting libraries for desktop application development, boasting fully GPU-accelerated rendering capable of handling an impressive 16 billion data points in real-time, all while maintaining low resource consumption. Widely regarded as the fastest charting library globally for both desktop and web platforms, LightningChart .NET is spearheaded by Pasi Tuomainen, CEO of Arction, offering a comprehensive suite of 2D and 3D graphics with over 170 library options.

Designed to cater to the most demanding industries, including science, engineering, economics, finance, trading, medicine, energy, space, and defense, **Arction LightningChart for .Net** excels in visualizing complex and extensive datasets. Notably, its latest introduction of SampleDataBlockSeries enhances the visualization of scrolling real-time data, ensuring a smooth monitoring experience with minimal refresh interval variations. This series type optimizes RAM and CPU resources, resulting in higher FPS and improved responsiveness to user interactions.

is the preferred choice for developers seeking unparalleled performance and functionality. Entirely GPU-accelerated and meticulously optimized for charting components, it offers a wide array of 2D and advanced 3D charts. It provides developers with fully customizable tools and flexibility for crafting applications of utmost complexity. **Arction LightningChart for .Net** also integrates signal tools such as SignalReader, AudioInput, SignalGenerator, SpectrumCalculator, and AudioOutput, further enhancing its utility across diverse industries.

Key Features of **Arction LightningChart for .Net** :

1. Fully GPU-accelerated chart control optimized for performance
2. Capable of rendering 16 billion data points in real-time with minimal resource consumption
3. Offers a comprehensive library of 170+ 2D and 3D graphics
4. Ideal for demanding industries, including science, engineering, economics, finance, trading, medicine, energy, space, and defense
5. Introduces SampleDataBlockSeries for enhanced visualization of scrolling real-time data
6. Optimizes RAM and CPU resources, resulting in higher FPS and improved responsiveness
7. Widely regarded as the fastest charting library for desktop and web platforms.
8. Provides fully customizable tools and flexibility for .NET developers
9. Includes signal tools such as SignalReader, AudioInput, SignalGenerator, SpectrumCalculator, and AudioOutput
10. Offers wide-ranging 2D and advanced 3D chart options
11. Ensures minimal flickering and delays during data visualization
12. Developed with a focus on presenting massive amounts of data efficiently
