is a versatile file manager designed for seamless integration into your ASP.NET applications and websites. It provides users with an intuitive interface similar to Windows File Explorer, making file browsing and management straightforward. This tool supports advanced upload features, allowing users to drag and drop files or entire folders, ensuring efficient and flexible file handling. Additionally, FileUltimate provides a well-organized download area and a document preview feature for over 70 file formats, including PDFs and Microsoft Office documents.

The user interface of **GleamTech FileUltimate** is sleek and functional, with dynamic ribbon toolbars and context menus that adjust based on user permissions, ensuring a smooth and clutter-free experience. Users can easily navigate through folders using the navigation pane and breadcrumb bar, and they have the option to view files in different layouts, from extra-large icons to detailed lists. The integrated viewers for documents, media files, and images support various formats and provide features like zooming and high-resolution displays, enhancing the overall user experience.

GleamTech FileUltimate also excels in performance and security. It supports browsing and extracting contents from various archive formats. It allows secure handling of root folders, whether they are stored locally, on a network, or in cloud services like Amazon S3 or Microsoft Azure. The tool is optimized for minimal load times and low memory usage, ensuring fast and responsive interactions. It integrates easily with different authentication systems, supports extensive event logging for tracking and auditing purposes, and is fully localized to support multiple languages, making it accessible to a global audience.
