Winsoft Joystick for FireMonkey v1.6 for Delphi & CB 10-12 Athens Full Source

2024-12-18 23:01:31

is a powerful component tailored for Delphi and C++ Builder versions 10 to 12 FireMonkey applications. Leveraging the standard Windows Joystick API, this component seamlessly retrieves joystick position and status information. With compatibility spanning both Windows 32 and 64-bit systems, developers gain the flexibility to create dynamic and responsive applications. Furthermore, developers can enjoy royalty-free distribution rights, ensuring a cost-effective and straightforward integration of joystick functionality into their FireMonkey applications.

Key Features of **Winsoft Joystick for FireMonkey** :

1. **FireMonkey Compatibility:** Specifically designed for Delphi and C++ Builder versions 10 to 12 FireMonkey applications.
2. **Windows Joystick API Integration:** Utilizes the standard Windows Joystick API for robust and reliable joystick position and status retrieval.
3. **32/64-Bit Support:** Compatible with Windows 32-bit and 64-bit systems, ensuring broad coverage.
