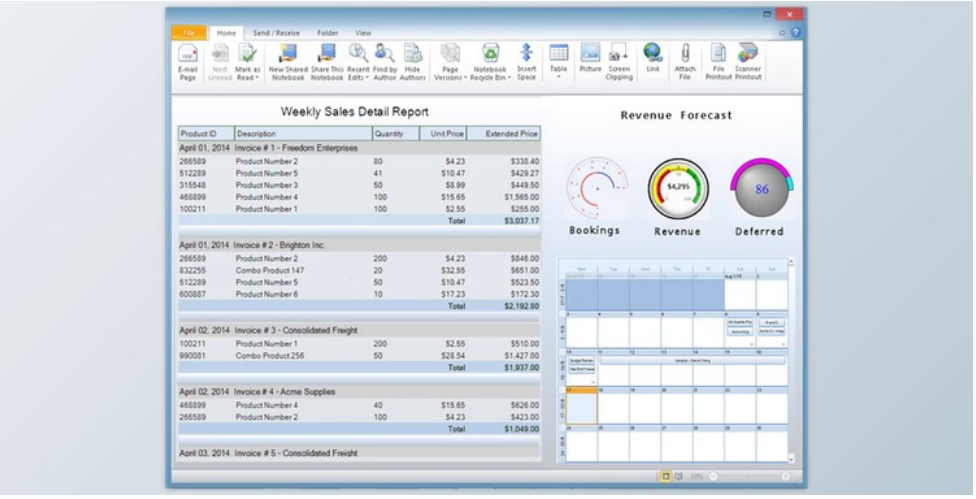
DBi Tech Studio Controls for .NET v1.6.0.0

2026-10-07 08:30:11



Studio Controls for .NET offers enterprise developers a comprehensive set of Windows layout and information presentation software elements targeted for programmers searching for business-analyzed commercial scheduling and UI presentation controllers. Studio Controls for .NET comprises 17 royalty-free .NET Windows Forms controls for Outlook mode monitoring, snap-in reporting, standard Windows layout, and intuitive end-user navigation and information presentation performance.

Adding Outlook mode scheduling, calendaring and navigation is fast and straightforward with Studio Controls for .NET. The item includes 17 royalty-free - consultation scheduling, Outlook Bar mode navigation, calendar, date choice, and UI demonstration components, also, DBI's best-of-course List and TreeView controls. Also seen in Studio Controls such as .NET is a range of Navigation, Data Edit, and Input controls, a tabbed interface controller, electronic display, customizable button, Tool Tip, Label, and dash controls.

Significantly, DBI's inherent Database layer, integrated into Studio Controls for .NET, provides programmers a single-point for its encouraging data structures of their dbiCalendar, dbiDayView, and dbiMonth controls. Programmers can join their scheduling information to DBI's inherent information supervisor (dbiPIM.dll) and communicating with every case of the controllers is just one direct reference. Studio Controls for .NET includes sample software and source code written in C# and VB .NET.
