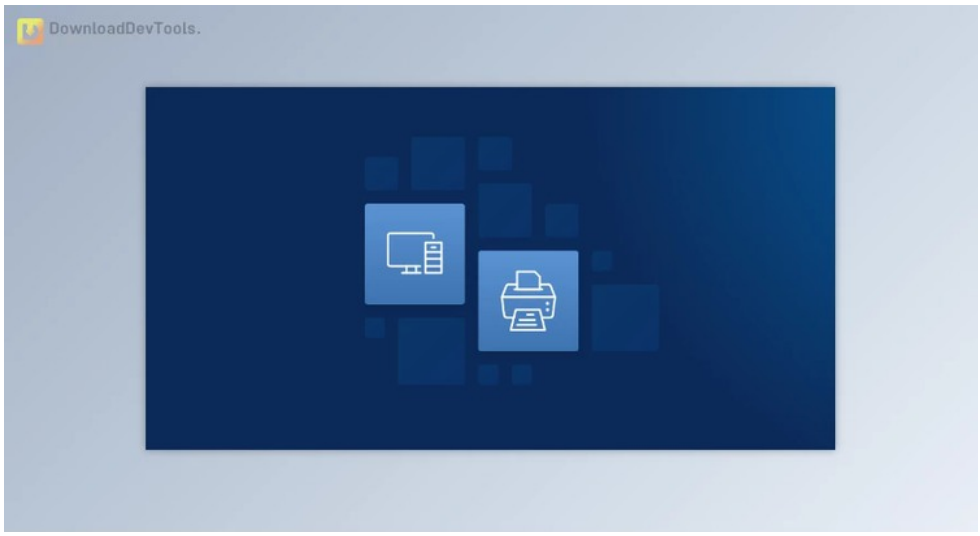
Terminalworks TSPrint v3.2.3.13

2026-09-04 12:05:04



is a remote desktop printing tool that simplifies the process of printing from a server to your local printer. Whether using Terminal Services, Remote Desktop, VDI, or Citrix environments, TSPrint makes printing easy without needing extra printer drivers on the server. Instead, it creates virtual printers that compress and send the print jobs directly to your local printer, saving you time and avoiding complicated setups.

Using **Terminalworks TSPrint** speeds up the printing process, even over remote connections. Traditional Microsoft printer redirection can be slow because it doesn't compress files, but TSPrint's technology reduces the size of print jobs for faster delivery. This means no more frustrating delays or complicated troubleshooting when you need to print remotely – TSPrint easily handles it.

Terminalworks TSPrint's plug-and-play installation also makes deployment a breeze. Whether you're rolling it out across a network or need specific configurations, TSPrint offers silent install options. It works with most major remote desktop platforms, including Citrix and Ericom, and multiple operating systems like Windows, OS X, and Linux. TSPrint is ideal for organizations looking to make remote printing fast, simple, and reliable.

Key Features of **Terminalworks TSPrint** :

1. Driverless Printing: No need to install printer drivers on the server; TSPrint uses virtual printers to handle the job and sends it directly to the local printer.
2. Improved Print Speed: By compressing print jobs before sending, TSPrint reduces wait times over remote connections, providing a smooth experience.
3. Easy Deployment: TSPrint is easy to install across networks with plug-and-play technology, silent install options, and Active Directory support.
4. Network Printer Access: TSPrint's Network Printer feature allows you to easily print to any available network printer, including those used by remote colleagues.
5. Universal Compatibility: Works with popular remote desktop services like Citrix, Ericom, and PCoIP, as well as on multiple operating systems, including OS X and Linux.
6. Local File Access: You can conveniently transfer or open files on your local device by right-clicking, allowing for seamless access to documents.
