What is 12 Power Zone Photoshop Actions and ACR?

Photoshop Actions:

In Photoshop, actions are pre-recorded sequences of steps designed to streamline image editing tasks. These sequences can be applied to single or multiple images, automating repetitive processes and enhancing efficiency. Users have the flexibility to create their own custom actions or download and install pre-made ones from various sources. With a simple click, these actions execute a series of predetermined adjustments, providing a quick and convenient way to enhance or transform images.

ACR (Adobe Camera Raw):

Adobe Camera Raw (ACR) serves as a plugin for Adobe Photoshop, specifically catering to the processing and editing of raw image files. Raw files contain unprocessed data directly from a camera sensor, offering greater flexibility during post-processing. ACR equips users with a toolkit for adjusting various elements within an image, including exposure, color balance, contrast, and more. This plugin is commonly employed for the initial adjustments to raw images before further fine-tuning and editing within the Photoshop environment.
