Perpetuum Software SharpShooter Collection v7.5

2025-01-30 13:02:22

Data visualization, analysis, as the processing components are designed for the framework .Net. SharpShooter Collection can represent a comprehensive pack of the .NET component which is for the applications of the BI and development. In this package, the use of proven reporting as well as components of OLAP are included for the process of reporting as well as analyzing. The charting and the gauges component are intended for the process of visualization of business processes. The collection is not simply just a peck of separate components, and it provides an interconnected framework for development design-time and run-time customization facility, has common data management as well as the appearance of the customization method. The SharpShooter collection can include the reports, SharpShooter Gauges, and the Dashboards of the Sharpshooter. The collection of sharpshooters provide the users with a unified development framework which will help the developers quickly to build a complex business and intelligence applications. It provides a solution that simplifies software development, management as well as budgeting, by minimizing the workflow disruption and later provides an unmatched value for the user software investment. The Sharpshooter collection provides tools that are very versatile for the process of data reporting, data analyzing, and visualizations.

Powerful reporting:

This reporting tool provides the users with a collection of features that are rich in having sets of tools to create even the most sophisticated report with less time and effort by the user. The user can design simple, side by side, multicolumn, hierarchical, pivot table, sub-reports, and a lot more. It provides easy data visualization that is mainly inbuilt, gauges as well as images that provide high-performance analytic abilities. The end-user designer in this case is provided with all these facilities. The product can be integrated into JavaScript application, windows, Silverlight, HTML5, and ASP.NET.

Comprehensive data analysis

The components of OLAP help the developers to create table order users and allow the user to explore and analyze data infinitely. Data in the tables of the pivot can be grouped easily, filtered, sliced, and drilled down or even rolled up, ranked, pivoted, and even aggregated. The interactive process of charting for the tables is a perfect component audition for the corporate information analysis.

Unrivaled Data Visualization

The components for the creation of the dashboards can offer the complete tools to design the ultimate charts, gauges, as well as dashboards. The user can create data visualization which is very rich from scratch and get gauges or charts that are pre-built. Some of the following chart types are being provided such as bar, line, area, candlestick, dials, switches, gauge library, spline, digital numbers, sliders as well as text. Are there circular and linear controls that can be added to over 180 gauges.

End-user designer up gauges and charts are available.

All the software components, in this case, are completely compatible with each other and the user can focus on all the applications that are essential instead of adjusting the components to each other. The service of subscription allows the user to include the purchase of the Sharpshooter and to keep the components as well as application up to date and get a new product that is included in the suite, to receive updates, services for the entire duration of the subscription process.

SharpShooter Collection Great Features:

The features of the SharpShooter collection are as follows:

- **Sharpshooter report**: In the indigenous record of the .NET the generator makes it possible for the developers and the users to make reports that are feature-rich and can incorporate them for the WinForms,ASP.NET, WPF, the Silverlight, HTML5 software. This product provides the user with the capability to style the reports with an infinite number

of connections, reports that are expert and regenerated into different formats, and publish reports.

- **SharpShooter Gauges:** it is a cutting-edge element for the process of producing an electronic dashboard along with the KPI's and BI programmers for the process of tracking the crucial real-time data. The items in this case include a visual control as well as 130 gauges for the designers to make them in addition to permit the controllers of editing.
- **SharpShooter chart:** It is a solution of initial charting along with the real WYSIWYG designer as well as innovative data design for the process of binding. The package of shipping includes a set of graphs that are mainly 2D.
