IP2Location .NET Component v8.2.1.0 + Country DB May 2020

2026-10-09 16:08:59

IP2Location .NET Part is basically a software development component along with an information so different which is available to the framework of .NET and permits the users and developers in order to find in real time where the visitor of the users is coming from by the IP address that they hold. The user then has the capability to dynamically tailor the content which belongs to the user's site based on the customer's country, as well as the area, city, latitude and longitude, zip code, domain name, time zone, weather channel code as well as weather channel title and a lot more to be mentioned later. The element permits the user in order to execute an IP Place search along with the IP2Location BIN data document which is contained in the order. This alternative has the capability to prevent the user from the hassle of the preparation of the relational database in order to get a place look up. If the user would rather take a database alternative, then the user can stop by the IP GEO location database bundle for further details. It should be noted, that the user has the capability to use the program development element in order to construct the solution on the Microsoft framework of .NET easily and flexible as well as the .NET Core with the utilization of the ASP.NET, C#, and even the programming languages of the VB.NET that are available.

IP2Location .NET Component Great Features:

It has the following features and attributes that are stated as below such as:

- It has the capability to work for all the IP addresses that are available including the IPv4, IPv6 in a single database or even the API.
