Timeline Framework VCL v7.0.16.0 (16 Dec 2020) for D6-D10.4 Sydney

2026-09-05 23:09:55

Timeline Framework is your Software Developer Kit for software developers who gives a simple entry to the Windows Timeline attributes on Windows desktop programs. Timeline Framework is the portion of Wireless Communication Library but may be utilized as a stand-alone library.

Timeline Framework VCL Great Features:

We develop must assist users in doing good things -- empowering a broad assortment of innovative, entertainment, and productivity situations. Returning to actions can be challenging. By composing User Tasks, program developers have a new tool to get users back in their program.

Beginning in Windows 10 16299 or greater, User Tasks generated by your program look in Windows Timeline. By composing User Actions in the Microsoft Graph, it is possible to express specific content inside your program for a showcased destination in Windows.

Every User Action represents one destination inside your program: like a TV display, record, or your present campaign in a match. When you participate in this particular action (by creating a Task Session), the machine makes a history document indicating the beginning and end time for this activity. Since you re-engage with this User Activity as time passes, numerous History Records will be listed for one User Task.
