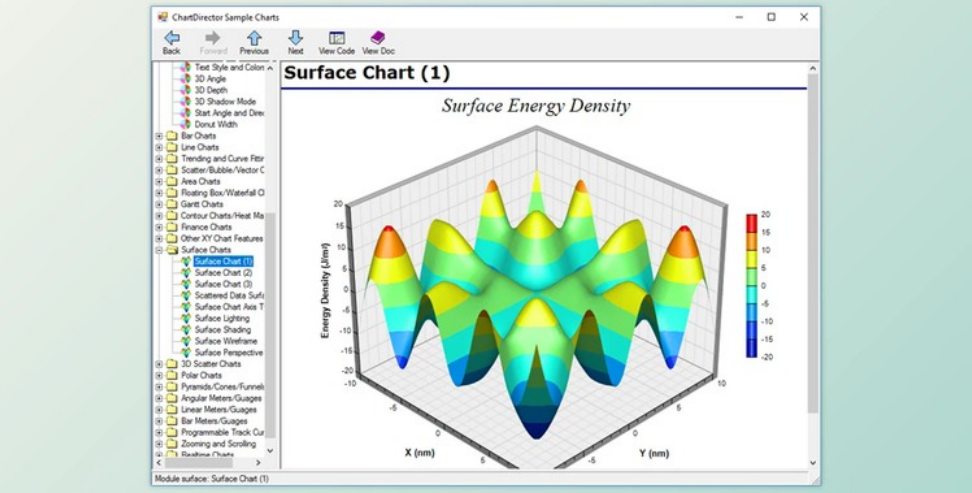
ChartDirector for ASP & COM & VB v6.0.1

2025-07-17 16:19:25



ChartDirector for Microsoft Visual Basic/COM/VB is a ChartDirector charting library used as a COM component. It can be used in any system that supports COM, such as ASP web pages and Visual Basic, MS Word Excel, Access, or any other system with VBA, VBScript support.

Notice: ChartDirector for ASP/COM/VB's "VB" refers only to classic Visual Basic (VB 6.0 and VBA), while the "ASP" refers only to classic ASP. Use ChartDirector for.NET instead if you're using VB in Visual Studio or VB for ASP.NET. ChartDirector works on 32-bit and 64-bit Windows ChartDirector is compatible with all common Windows versions and can be used with 32 and 64-bit applications.

ChartDirector is a professional tool for charting Windows and Web applications. You can choose from a wide range of chart options, including line, donut, and bar, as well as spline, step, trend, trend, line, and curve-fitting. You can display charts on the screen or export them to PDF, SVG, and PNG, JPG. GIF, GIF, and BMP formats. Every chart detail can be customized, including text, labels, scales, marks, zones, and axes. ChartDirector supports.NET Core and WPF, ASP.NET.NET MVC, Web Forms, Windows (C# and other CLI language), C++ and Java, JSP and ASP, VBScript and VBA, JavaScript, and PHP. It is compatible with Windows, Linux, Solaris, Mac OS X, Solaris, and FreeBSD.

ChartDirector for ASP & COM & VB Great Features:

One of the most common usages of VBScript is for ASP applications. ChartDirector for ASP/COM/VB includes special server-side and browser-side controls to support interactive charts for ASP applications.

Server Side Chart Viewer Control ChartDirector has extensive chart types. The Chart Viewer control generates the HTML tags to deliver these charts to the browser and to supporting user interactions, such as richly formatted tooltips, clickable hot spots, programmable track cursors, and zooming and scrolling. It also supports AJAX chart updates, streaming chart updates, and delivering the chart as an image or PDF download.

JsChartViewer Javascript Library, The Javascript Chart Viewer, is the browser side counterpart of the JSP Chart Viewer. It provides the user interface for user interactions with the chart on the browser side.

Scalable Vector Graphics (SVG) for Responsive Web Design ChartDirector can generate charts in Scalable Vector Graphics (SVG), in addition to PNG, JPG, and GIF. SVG ensures the chart remains sharp and crisp for responsive web design, for which the chart can resize to fit different user devices.

ASP Charting Sample Code Includes plenty of ASP charting sample code with an explorer-style browser page for easy viewing.
