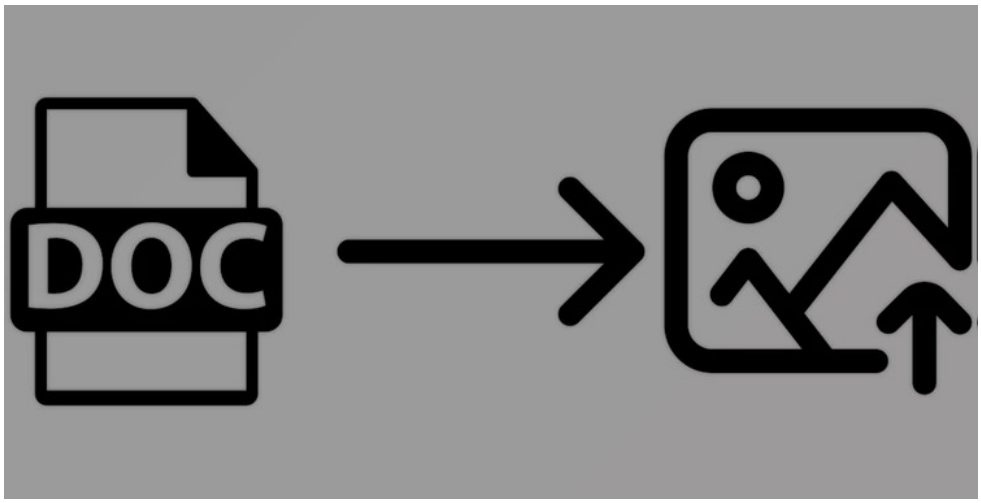
SubSystems DOC to Image Converter v17.0 for .Net

2025-06-09 11:11:55



DOC to Image Converter delivers a very simple and hassle-free way of switching from DOC, DOCX formats, or text to several image formats inside your program. You may make only a few functions calls to perform the conversion.

No additional external elements or programs will be needed if you use this specific converter. The converter comprises a highly effective DOC and DOCX parser and pagination instrument employed by our TE Edit Control merchandise to offer you a cost-efficient, feature-rich and powerful translator.

The converter paginates that the DOC file info into many print size webpages then generates Image for every webpage. This enables for converting big DOC file into a variety of equivalent size pictures.

The converter supports the following attributes:

- Support for the DOC and DOCX format files.
- Support for complicated multicolumn RTF information with positionable images.
- Support for Unicode and right-to-left languages.
- Support for the vertical text from text objects and cells.
- Sophisticated table formatting including nested tables.
- **Output Image Formats:** BMP, Jpeg, Gif, Png, Tiff, Icon, Exif, and Enhanced Metafile.
- Set paper size, margins, and orientation for Picture output.
- Enlargement or diminishing of output Picture.
- Support to the arrangement area that allows for automatic sequence number generation.
- Improved support for variable-width multi-column segments.
- Support for adjoining page-number fields.
- Support for style-linked paragraph numbering.
- Control on output image resolution.

Code Output: The created Pictures can be written to a disc or it may be recovered in a memory buffer.

Programming Interface: Your program only uses function calls to perform the conversion. The Win32 and Win64 models contain the purpose and constant declaration documents for C/C++, Visual Basic, and Delphi. The item is usable in almost any environment that allows for phoning easy DLL functions.

The .NET edition of the item consists of pure C# managed code. The .NET version may also be used in an ASP.NET server program.
