Gibraltar VistaDB v6.4.2 (Embedded Database for .NET)

2025-02-27 19:30:19

Gibraltar VistaDB is described to be a little handle assembly that the user has the ability to deployed along with the user program easily and flexibly, and any database in a single file. With the help of the implementation of the Xamarin, it is very possible for the user in order to match a complete RDBMS under user mobile phone. It should be noted that the Microsoft has been able to work tirelessly in order to earn a powerful combination of SQL Server as well as .NET for its users and developers along which the VistaDB which has the ability to bring for the user and easy as well as a small way to install the bundle. Rather than requiring to send a huge installation which can be installed independently for the user program in order to work, the user has the capability to spend 2MB of the additional assemblies for the user as well as the programs of .NET. It is very simple and easy to create a software which belongs and begins with the VistaDB and the user has the ability to scale with the help of the SQL Server all from a frequent codebase which is available. It should be added that the Gibraltar VistaDB is considered to be a totally compliant ADO.NET data provider along with the assistance for the framework of the entity, typed data sets, as well as direct data access of the API for the cursor base operation to be efficient. As a result, it is currently very compatible with the huge array of third-party ORMs along with the programs for the reporting and a lot more.

Gibraltar VistaDB Great Features:

It has the following features and attributes that are stated as below such as:

- It is very easy to be deployed by the user and developer and the user has the ability to deploy the app with each database easily.
- VistaDB is considered to be a fully compliant data provider that has the ability to support the Entity Framework.
- It has the capability to support their provider factory model of ADO.NET for the users and developers.
- It permits the user in order to write a single code base which can be a target either for the runtime of the SQL server or VistaDB.
- Thanks to it the user has the capability to have a single application which can easily supposed to Microsoft SQL server and also to change the connection string.
