Devart dbExpress driver for MySQL v7.2.1 (09 Jun 2020) for D10.4 Sydney

2026-10-08 11:40:05

DB Express is described to be a database independent coaching process that has the capability to define the frequent interface in order to provide the user with a rapid access to the MySQL right from the builder of C++ along with the Delphi is like the community edition which is located on the Windows as well as the Mac OS, and finally the Linux platforms. Along with the particular server DB Express has the capability to provide a motorist as an independent library that has the ability to implement the frequent DB Express for the users and developers for the process of processing the queries as well as storing the procedure. Since the access data coating is very thin and simple, it has the capability to offer a very high-speed database and process of connectivity and it is very easy for the user and developer in order to deploy it. The user has the ability to use the driver in the same manner precisely as one is basically provided by Embarcadero. The driver of the DB Express for MySQL has the capability to provide the access to the database of the MySQL and it has the ability to work with the native network of the MySQL protocol as well as the client of the MySQL. If the user does not utilize the indirect style, then the client library of the MySQL is necessary. The software according to the driver of DB Express for MySQL is described to be very simple and easy for the user to deploy and it does not require any installation by the user for different data supplier as well as layers. The reason is that they can work quicker compared to the ones that are standard Delphi data connectivity options that are present. It should be added that the Db Express has the capability to provide the users with an extra chance in order to use the MySQL directly without having to involve the client library of the MySQL. The driver for the MySQL is basically a cross-platform option for the creation of the application with the use of the different IDEs. Db Express for SQL has the ability to assist with the user Fire monkey platform and permits the user in order to develop the magnificent high performance visually or the windows as well as macOS.

Devart dbExpress driver for MySQL Great Features:

It has the following features and attributes that are stated as below such as:

- It does not limit the user choice for the process of development of the platform.
- It has the capability to perform the per component tracing process of the SQL statement, the process of execution as well as commits.
