Procedural hair

- Create hairstyles with the help of a team of **friendly hairdressers**
- **Strand groupings** to enable non-destructive filtering
- Many **options for dynamics** possibilities for **every type of simulation**
- The familiar **Iterative Refinement** workflow
- Simple to utilize **grooming system that can be set to a preset** system

Close Cinema 4D integration

- Worked within the **Cinema 4D's transformer** and the tagging framework
- A friendly **menu** to ensure a **rapid start**
- Built-in and **all renderers from third-party** provide support
- **Simple SDK** to allow access and extension
- Many options of **options for export and import** options for export and import

Tools for intuitive modeling

- **Comb, comb**, and **hair cut** hair
- It is easy to define the **flow of fur** on the surface using Arrows
- **Frizz, curl, clump**, and **braid** hair in a procedural manner
- Hairstyles are styled by dragging **the control point**
- Make use of **Mesh strips** to create hair

Feathers as well as foliage

- **Feathers that are procedural** with control over their shape and rotation
- Mix **various UV channels** to achieve advanced texturing
- **Control of scattering** over shaders and materials
- **Mesh of proxy custom-made** dispersing over hair
- Propagation controls to help grow **hair over hair**
