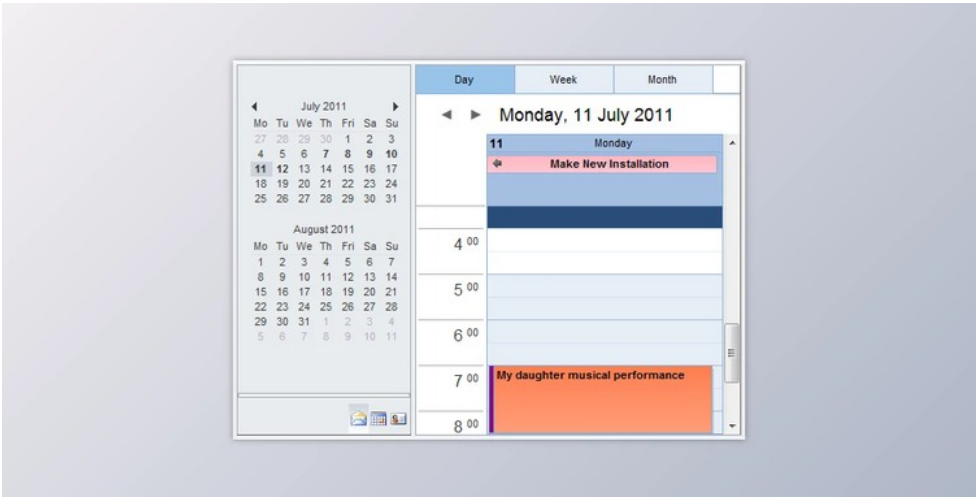
Quantum Whale Scheduler.NET v1.1

2025-03-23 02:32:46



Scheduler.NET is a component library that provides scheduling and calendar features similar to those found in Microsoft Outlook.

Scheduler.NET offers various views to manage appointments, including day, month, and week views, multi-column calendars, reminder dialogs, built-in appointment, and reminder, and allows you to store and modify single or recurring events.

Scheduler.NET component pack includes:

- Day, Week, Month, and compound views.
- EventServer component storing actual events,
- Multi-column month calendar.
- Outlook-like navigation bar.
- Built-in appointment and reminder dialogs.

Scheduler.NET is written in C# and built on .NET classes. It ships with full source code, including design-time code.
