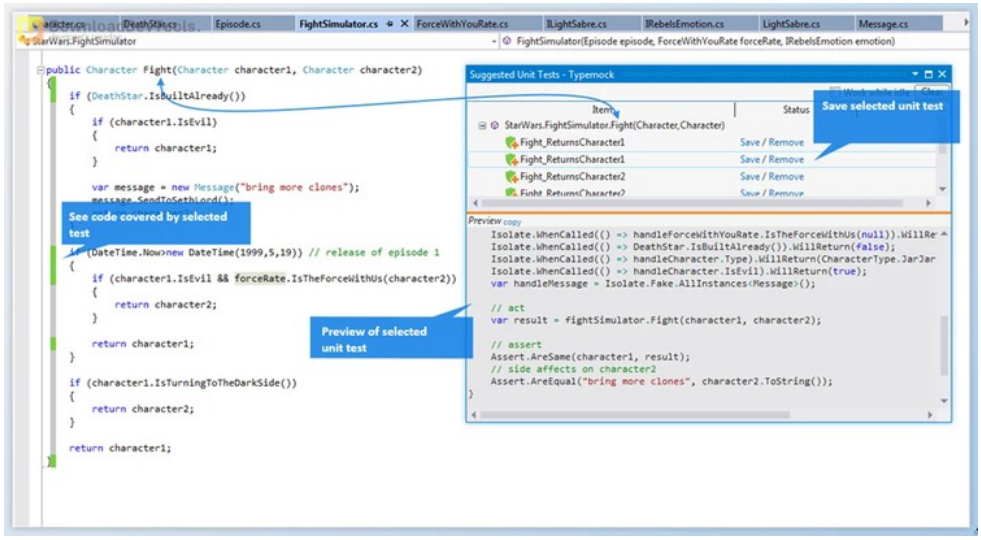
Typemock Isolator v9.3.8.0 Retail

2025-12-02 13:34:58



is the most powerful unit testing framework available for .NET developers. It provides a complete solution that includes everything from mocking to code coverage and even test suggestions. This means you can mock any part of your code without needing to make changes, making it perfect for both new and legacy code. With **Typemock Isolator**, you get instant code coverage insights as you write your code, saving you time and effort by showing which parts of your code are tested and which are not.

One of the standout features of **Typemock Isolator** is its ability to suggest unit tests automatically. This innovative feature helps you quickly create a comprehensive test suite by providing test suggestions tailored to your specific code. You can review and approve these suggestions, ensuring they fit well with your existing codebase. Additionally, the Smart Runner feature enhances your testing process by only running the tests affected by your latest changes, giving you faster feedback and helping you develop more efficiently.

With **Typemock Isolator**, you have a powerful tool that simplifies unit testing and boosts your productivity. It supports agile development by providing real-time code coverage, efficient test running, and intelligent test suggestions. This all-in-one solution helps you maintain high-quality code with less effort, making it an essential tool for any .NET developer.

Key Features of **Typemock Isolator** :

1. **Isolate:** Powerful mocking capabilities without changing your code.
2. **Mock Everything:** Mock statics, private methods, constructors, events, LINQ, ref args, live, future, and static constructors.
3. **Suggest:** Automatic unit test suggestions for new and legacy code.
4. **Smart Runner:** Fast test runner that only runs impacted tests.
5. **Coverage:** Instant code coverage feedback in your editor.
6. **No Need to Change Your Code:** Write tests without changing your code, even for legacy code.
7. **Cleaner Code:** Improve your code integrity and deliver quality code.
8. **Sleek API:** Fake entire object models with a single statement.
