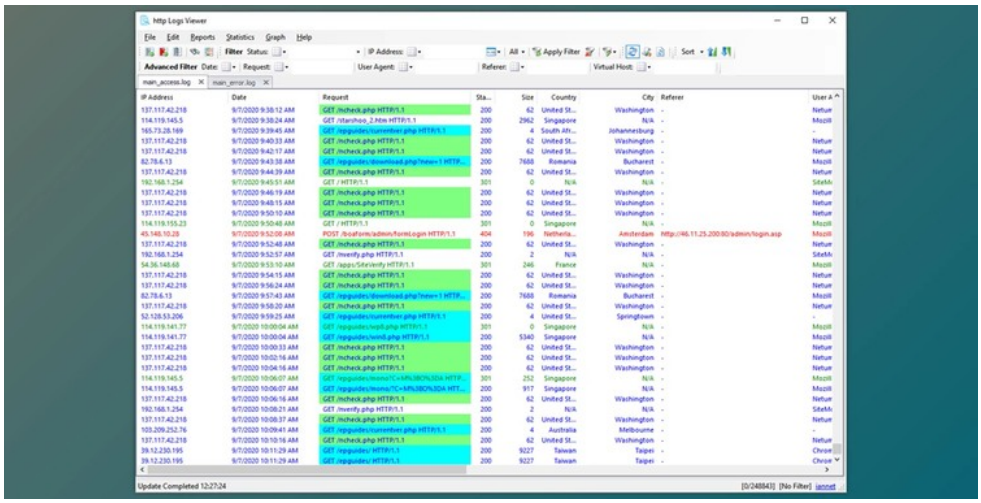
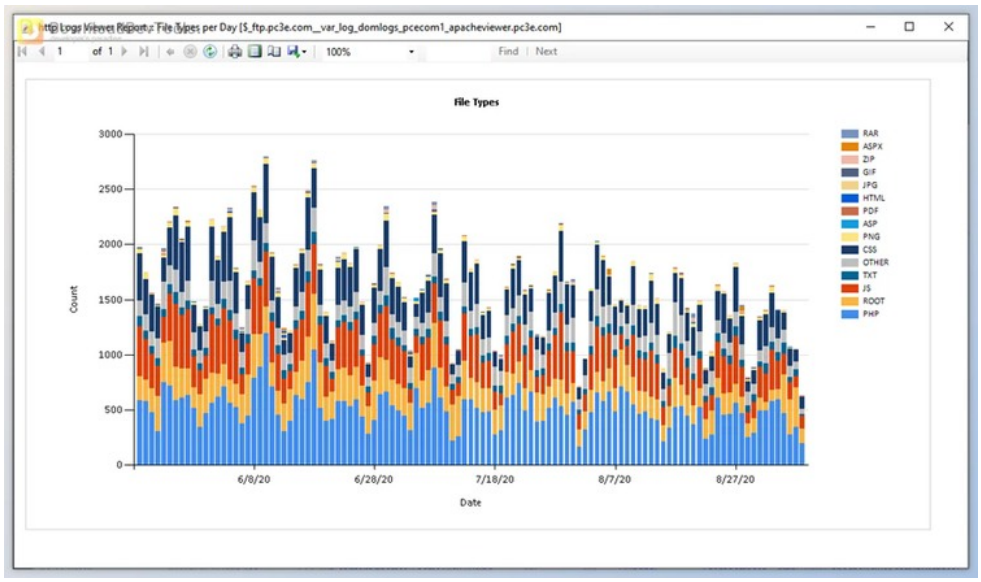
HTTP Logs Viewer v7.01 for Win + Keygen

2025-12-02 13:51:46





, formerly known as Apache Logs Viewer, is a versatile and free tool designed to streamline the monitoring, viewing, and analysis of Apache, IIS, and nginx logs.

With its intuitive interface, users can effortlessly sift through log files, leveraging powerful search and filter functionalities to pinpoint specific HTTP requests based on status codes.

HTTP Logs Viewer also offers insightful reporting capabilities, allowing users to generate pie and bar charts within seconds. Additionally, it provides detailed statistics such as top hits, top errors, status code distribution, and total bandwidth consumption.

Compatible with various log formats, including Apache common, combined, and custom logs, IIS W3C logs, nginx server logs, and Wamp server logs, HTTP Logs Viewer is an indispensable resource for web analytics.

HTTP Logs Viewer empowers users with comprehensive insights into their web server activities, whether optimizing website productivity, detecting errors for prompt resolution, or gaining insights into visitor demographics through geographical data analysis.

Key Features of **HTTP Logs Viewer** :

1. Intuitive interface for effortless log file navigation
2. Powerful search and filter functionalities for pinpointing specific HTTP requests
3. Insightful reporting capabilities with pie and bar chart generation
4. Detailed statistics, including top hits, top errors, and status code distribution
5. Compatibility with various log formats: Apache common, combined, and custom logs; IIS W3C logs; nginx server logs; and Wamp server logs
6. Geographical data analysis to determine visitor demographics
7. Enhanced web analytics for optimizing website productivity and error detection

所有软件资源 100%安全 已检测 无病毒 无篡改
