

Workflow Engine for .Net Core Enterprise v15.0.1 (26 Sep 2024)

2025-04-16 10:00:00

is a powerful tool for simplifying and automating business processes in your .NET or .NET Core projects. Its user-friendly HTML5 drag-and-drop interface allows you to design and manage workflows easily without writing code. Whether you need to handle document approvals, process data, or manage long-running tasks, Workflow Engine helps you streamline operations and reduce manual tasks.

This solution is perfect for businesses that need to automate approval workflows, manage data from external systems, and handle complex processes that may take days or months to complete. The visual designer makes it simple for business users to create and update workflows independently, ensuring flexibility and efficiency. Integrating seamlessly into your existing systems, **Workflow Engine for .Net Core Enterprise** saves time, reduces errors, and helps keep your processes running smoothly.

Designed with enterprise needs in mind, Workflow Engine supports a wide range of databases, including both SQL and NoSQL options. **Workflow Engine for .Net Core Enterprise** also offers advanced features like parallel workflow support, process scheme updates, and localization for global teams. Whether you're looking to automate document approvals or build custom long-running processes, Workflow Engine provides a reliable, scalable solution for your business.

Key Features of Workflow Engine for .Net Core Enterprise :

1. HTML5 Visual Designer: A web-based, intuitive drag-and-drop interface for designing and managing workflows without writing code.
2. Parallel Workflow Support: Split workflows into branches that run concurrently, allowing for faster task completion.
3. Document Approval Workflows: Automate approvals and sign-offs, making business processes like purchase orders and contracting more efficient.
4. Long-Running Processes: Manage workflows that may take hours, days, or months to complete, with automatic state-saving to ensure process fail-safe.
5. Data Processing: Perform actions on data from external systems or IoT devices, with support for file operations and

HTTP services.

6. SQL and NoSQL Database Support: Compatible with MS SQL Server, PostgreSQL, Oracle, MySQL, MongoDB, CosmosDB, and more.
7. Localization Support: Translate the interface into multiple languages for global teams.
8. Process Scheme Updates: Update workflows dynamically while keeping processes running smoothly, allowing older processes to complete under their original scheme.
9. XML Import/Export: Easily export and share workflows for reuse across projects or teams.
