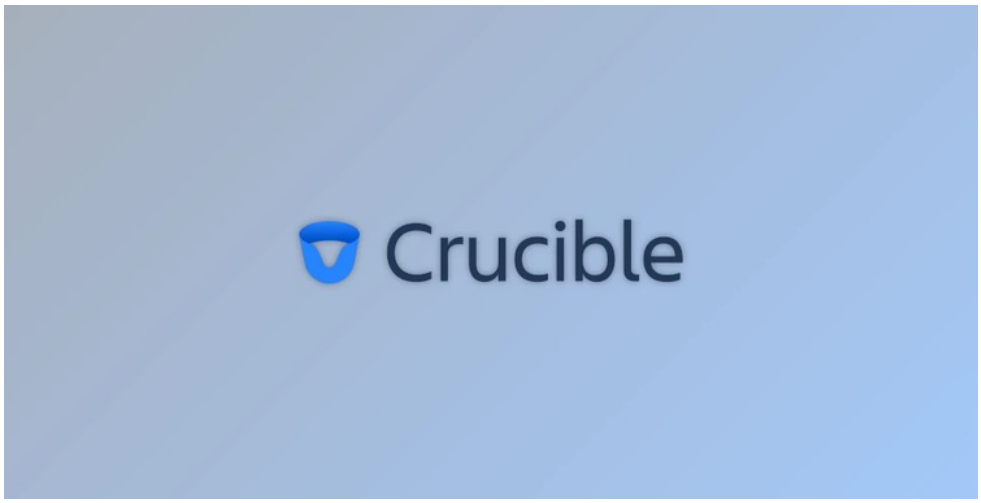
Atlassian Crucible Enterprise v4.7.0

2024-12-18 23:01:45



Crucible is a collaborative code review program by Australian software firm Atlassian. As with other Atlassian products, Crucible is a brand new program chiefly aimed at business, and specific features that allow peer evaluation of a codebase might be contemplated business social software.

Evaluation code, share changes, share information and identify flaws across SVN, Git, Mercurial, CVS, and Perforce.

Produce proper, workflow-based, or speedy code testimonials and delegate reviewers from throughout your group.

Discuss: Switch any code inspection into a threaded conversation and comment on particular source files, lines, or a whole changeset.

Track: do it on what is important with merged views to your code action for commits, reviews, and remarks.

Report: Boost code quality with information on which portions of your codebase have never been satisfactorily reviewed. Take a fast view of inspection status, and that may be holding up reviews.

Development workflow: Jira Software automatically upgrades issues based on inspection action. Back in Crucible, turn inspection comments into problems with a single click.

Connected code: Connect Crucible into Bitbucket Server with a single click and make testimonials instantly for any new branches.

Constant integration: Crucible may be customized to match any usage case. Do not observe the add-on you want? Construct your own using the REST API.

Code review instrument: Grab big flaws, enhance code structure, or share desired improvements with appropriate, workflow-based, or speedy code reviews.

Inline talks: Collaborate directly on your code with inline comments, threaded discussions, and mentions.

Activity flows: Practice just what's happening throughout your projects in real-time together with action flows, revealing recent remarks and review updates.

Jira Software integration: Automatically upgrade Jira Software problems based on review action and turn inspection comments into problems with a single click.

Pre-commit testimonials: Review code before check-in and make sure any code entering production was reviewed.

Real-time alarms: keep on top of all of the action on your endeavors with personalized alarms and inspection reminders.

Reports and records: Keep stakeholders informed with graphs and code metrics that reveal lines of code (LOC) dedicated, high committers, the number of modifications on the job through its foundation, and much more.

Audit and compliance: Access all of code inspection information down to a particular code inspection background and have traceability with problems and source code if you're using Jira Software and Fisheye.

Iterative testimonials: Ensure all documents you're reviewing are present because code is re-factored and altered during the review procedure.
