Devart SQL Server Data Access Components (SDAC) v9.4.1 for D10.4 & v8.2.8 for D6-D10.4 Full Source

2026-10-07 08:29:25

SQL Server Data Access Components is described to be a library of the component that is capable of providing a connectivity to the server of the SQL which is native right from the Delphi as well as the C++ Builder which includes the Community Edition along with the Lazarus mainly for the windows, Linux, Mac OS, iOS, and finally Android and for the 32 bit as well as the 64-bit platforms. The SQL Server data access component have the ability to directly connect to the server of SQL through the OLE DB is considered to be a native SQL Server interface. SQL Server Data Access Components is basically designed in order to help the programmers in order to develop a fast and a clean SQL Server database application for the user and developer. SQL Server Data Access Components is considered to be having a high performance as well as a feature-rich connectivity solution of SQL Server and it is a complete replacement for the standard of SQL Server connectivity as well as has the ability to present a very efficient native alternative to the database engine of the Borland along with the standard of the db Express driver in order to access the server of SQL. It is considered to be a cross-platform solution for the process of developing the applications with the use of the SQL Server and has the ability to support the fire monkey application as well as the platform of development which permits the user and developer in order to develop the visual spectacular desktop which is high performance as well as the application of the native mobile. SQL Server Data Access Components has the ability to support a huge range of specific features of SQL Server just like the notification, transparent application failover, reliable messaging process, user-defined types, geography, hierarchy ID, table valued parameters and last but not least the SQL Server compact edition. It permits the user on developer as well as the user application in order to work with the SQL Server directly through the TCP/IP which involves the client of the SQL server and hence, it has the ability to significantly facilitate the process of development as well as the configuration of the user application.

Devart SQL Server Data Access Components (SDAC) Great Features:

It has the following features and attributes that are stated as below such as:

- It has the ability to provide direct access to the data server.
- It does not require the process of installation of different other data provider as well as layers by the user on the system.
- The interface is very compatible with the data access method which is standard just like the ADO and BDE.
- The library versions of the VCL, FMX, as well as LCL are present.
- It has the ability to provide the separated run time as well as the specific parts that permits the user in order to create a console application which is pure just like the CGI.
- It provides support for the Unicode.
- It has the ability to provide a string support connection.
- Support for the encryption connection without the validation of the certificate is present.
- It provides the ability for the searching after installed SQL Server as well as the databases in the Network which is local.
- It does ability to provide the support for the letter SQL Server after Microsoft including the express as well as the addition of compact.
- It has the ability to support the data types of SQL Server.
- Includes the providers for the standard edition of UniDAC.
- It has the ability to enhance the support for the user-defined types as well as the SQL Server.
- It provides the ability to the user in order to lock the record as well as tables.
- It provides the possibility in order to change the name of the application for the process of connection.
- It prepares the user-defined statement for the update.
- The automatic process of data updating with certain component.
- It has the ability to provide an automatic refreshing of the record as well as automatic query preparation.
