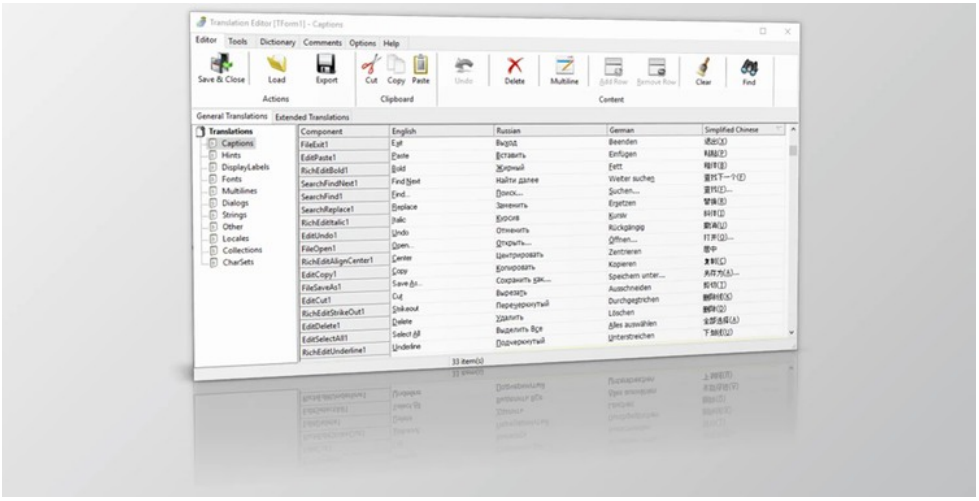
TsiLang Components Suite v7.8.4.0 (VCL & FMX) for D7-D10.4

2026-07-21 11:01:47



Allows the user to receive a solution that will simplify the process of adapting to program certain languages at the same time and provide the user the chance to provide the software functionality. The user will have the ability to localize whatever he needs fast without wasting any time. It will look after all the facets that are located in the app such as a system area, attributes of elements, constant series, source of strings, as well as regular dialogue strings. It has the companies support for the variant a Fire Monkey as well as FireUI. It helps the user to have complete control over all the applications and the user decides where to select and store the information of translation by his choice. It can prepare a huge project which is prepared for the process of globalization in many instances and it includes gears. The user is sure to get the fantastic tool of SIL editor. The dictionary manager in this case will allow the user to shop a dictionary and also to use them in subsequent endeavors and it is known to be another tool to cut back the cost. It is an automation machine and the information can be loaded from the home developers of SIL editor and even TsiLang. The application will likely be able to localize the consumer experience and the overall effect and look of it.

TsiLang Components Suite Great Features:

It has the support of Fire Monkey and FireUI and the components suits permitting the user for the process of creating programs for all the platforms, targets, and services. It permits them to produce applications for Mac OS, iOS with identical performance as the programs of Windows.

Shifting languages on the fly in run-time in Addition to design-time

Just with the petition of the user, to tame analogy of the user interface will alter and along with the TsiLang the user no longer than waste to conduct and create an application for the process of checking interface and can preview the interface which is interpreted during the runtime as well as design time.

No external databases or files to make multi-language software

Additional files that are utilized for the process of encouraging the translation are being formed from the past. With the use of the TsiLang, the user can create programs by himself in one file of EXE.

Language Shifting Procedure is at your hands 100%!

TsiLang Dispatcher can permit the user which language altering process in the job of the user that has many forms. The user does not make to connect to each part of TsiLang. The process of altering the TsiLang Dispatcher speech will have built the language to modify from the program. The translation wizard of the TsiLang will permit the user to configure this process in rapid steps.

Your user also has control over translations!

With the use of the TsiLang, the user cannot construct and create light apps the users do not have to incorporate information translation in the program of EXE. Still, in some cases, the user may provide a chance to edit the translation to the end-user without any assistance by storing the data in the SIL or even a binary file such as SIB.

Nothing will be missed out!

It will make sure that the user interprets all the properties of the chain system and the elements of locales along with dialogs, captions, and strings. It usually comes with another beneficial attribute when it translates to a user's program to a language that has a long average word length and can change any property from any part for the process of repositioning and resizing the controllers.

A whole solution to cover all the probable causes of localization!
