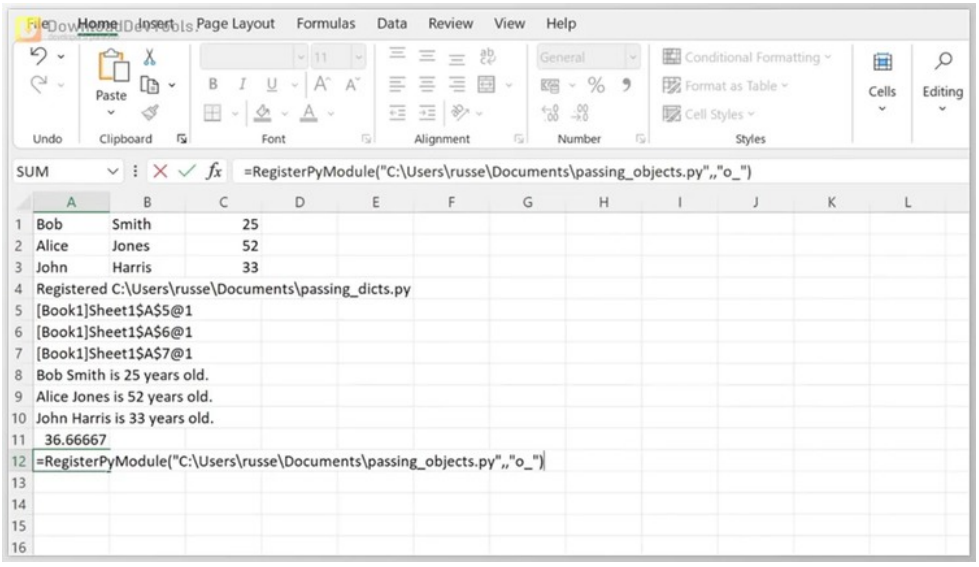
xlSlim Premium v4.0.2 for Win x64

2025-04-08 10:21:31



allows users to work with Python in Excel through a streamlined process that anyone can use without difficulty. The xlSlim tool gives users access to Python functions and workflow without prohibitive setup procedures or code adjustments. The application enables users to execute Python commands and access its features while working with the same system they already use.

The flexible tool is available at no cost with the requirement of purchasing the Premium license to access additional advanced functionalities. The tool contains integrated Python 3.10 without requiring you to run separate Python installations. The **xlSlim Premium** tool makes it easy to transfer data seamlessly into Excel spreadsheets while allowing Python iterators, NumPy array, and pandas data frame creation from Excel range selections. The tool handles Python object caching on its own without requiring user involvement to manage it.

The greatest benefit of **xlSlim Premium** includes its capability to operate under established Python environments, including conda and virtualenv, while maintaining your current framework. The background execution of Python code through xlSlim allows users to prevent DLL version compatibility problems. xlSlim serves as your universal tool for improving any Excel and DuckDB operations workflow automation or data analysis tasks.

Key Features of **xlSlim Premium** :

1. **Python Included:** Comes with Python 3.10 built-in, so there's no need for a separate installation.
2. **No Code Changes Required:** Run Python functions from Excel without making any changes to your existing Python code.
3. **Data Streaming:** Use Python iterators to stream data into Excel effortlessly.
4. **NumPy and Pandas Integration:** Create and manipulate NumPy arrays and pandas data frames directly from Excel ranges.
5. **VBA and Add-in Support:** Call VBA functions from Python and Excel add-in functions from Python.
6. **Automatic Object Caching:** Python objects are automatically cached, simplifying object management.
7. **Use Existing Environments:** Continue working with your existing conda or virtual setups.
