Chilkat ActiveX Components v11.0 MultiOS x64 & x86

2025-06-12 09:33:42

is a versatile toolkit that provides developers with over 90 classes for handling various internet protocols, formats, and algorithms. It is compatible with various programming languages and platforms, ensuring developers can integrate it easily into their projects. When using Chilkat with older programming environments like Visual Basic 6 or Visual FoxPro, it's important to use the 32-bit version of ActiveX, regardless of whether your Windows system is 32-bit or 64-bit. This helps to ensure smooth operation and compatibility.

Installing both the 32-bit and 64-bit versions of **Chilkat ActiveX Components** for applications running on classic ASP or

Components Java & ActiveX

SQL Server can help avoid compatibility issues since it's not always clear if these platforms run in 32-bit or 64-bit mode. When using PHP on Windows, you may need to enable a specific DLL file in your PHP configuration to use Chilkat effectively. Always remember to download and extract the ActiveX files to a local drive, and they must be registered on any computer where they will be used, typically via an automated process in your application's installer.

Key Features of **Chilkat ActiveX Components**:

1. Cross-Language Support: Works with multiple programming languages, enhancing flexibility.
2. Cross-Platform: Functional across different operating systems, broadening usability.
3. Comprehensive API: Offers over 90 classes covering many needs, from network protocols to data compression.
4. Compatibility with Older Environments: Specifically supports 32-bit applications like VB6 and Visual FoxPro on modern 64-bit systems.
5. Simple Installation: Available via MSI installer for easy integration into server environments.
6. DLL Registration: Includes batch scripts for registering the ActiveX DLLs to ensure proper function within applications.
7. PHP Integration: Supports PHP on Windows with specific configuration adjustments.
