PELock .Netshrink EXE Packer & Virtual DLL Binder v2.9.1 Full Version

2026-05-09 16:31:31

PELock .Netshrink EXE Packer & Virtual DLL Binder is a smart PELock utility for Windows and Linux .NET developers, which makes an application smaller, safer, and easier to distribute. It is an executable packer, i.e., it does not alter the performance of your program, but it simply minimizes the size of your file, thereby enabling you to distribute lightweight applications, which have a quick loading speed and occupy less space.

In addition to compression, it also has good password protection facilities with modern AES-256 encryption and a SHA256 verification. This makes your program safe against unauthorized usage; only those users who have the correct password will be able to run it.

Lastly, **PELock .Netshrink EXE Packer & Virtual DLL Binder** will be able to package your application and every DLL library into one executable. It will allow you to deliver your software as a single executable file, and still have the advantage of protection against crackers and automatic identification of the .NET Framework.

Key Features of **PELock .Netshrink EXE Packer & Virtual DLL Binder**:

1. **Executable Compression** – Shrinks .NET applications with LZMA compression for smaller, faster programs.
2. **Password Protection** – Locks your app with AES-256 encryption and SHA256 hashing, with the option to store passwords in the Windows Registry.
3. **Virtual DLL Binding** – Combines DLL files with the main executable so you only need to distribute one file.
4. **Anti-Cracking Tools Detection** – Monitors for common .NET cracking or unpacking tools and shuts down if tampering is detected.
5. **.NET Framework Detection** – Uses a native x86/x64 loader to ensure the right .NET version is installed before launch.
6. **Command Line Support** – Passes arguments smoothly between the compressed file and your application.
7. **Resource Preservation** – Keeps all original app resources (icons, images, metadata) intact after compression.
8. **Wide Framework Compatibility** – Works with all available .NET Framework versions.
9. **Strong-Name Signing** – Preserves or applies Strong-Name assembly signing for added integrity.
10. **Digital Code Signing** – Supports adding one or even two digital signatures for authentication and trust.
