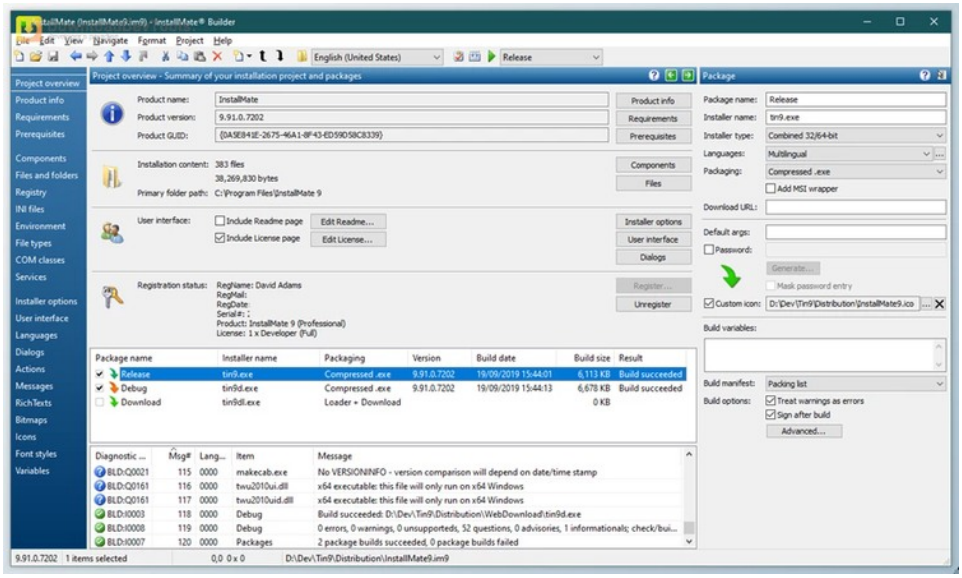
Tarma InstallMate v9.122.7619.9130 (29 Dec 2024)

2025-04-15 14:14:45



Tarma InstallMate is considered to have the ability to produce a software installer for a lot of Windows 32-bit as well as 64-bit servers as well as desktop programs for the users and the developers that consist of full customization of the installer activities as well as dialogs. Along with the Tarma InstallMate, it can create a standalone installer for most of the Windows 32-bit as well as 64-bit servers or even the platform that is on the desktop with full customization as well as activities for the installer. Installment nine is capable of producing software installers for Windows 32-bit. It can contain many features that permit the user and developer and give them the ability to find the product 5 times compared to its price. It should be added that the installers are capable of running with the help of a graphical user interface or even with a progress box that is visible or can be hidden. It is fully self-contained and needs no additional support or file during the run time and installation enhancement; it is known to simplify the user product deployment process greatly.

It permits the user and developer to deploy the product both in an interactive manner as well as an automated environment. Every installer can build a single package as well as a loader, which is different and separate from the installation of the archives. It permits the user to deploy the product in any way that suits the user and the customer simultaneously. **Tarma InstallMate** installers are known to be present, and it has been translated into more than 90 languages. It is capable of using Unicode and permits the localization process to the installer aspect for all the languages, including right-to-left languages such as Arabic and Hebrew. It should be added that **Tarma InstallMate** installers permit the user and the developer full access to all the aspects with a built-in dialog editor as well as an editor of an action sequence. This means that it permits the user and developer to customize the installer the same way that the user needs it, and in this, there is no scripting required.

Tarma InstallMate can provide a different packaging method for the users and developers, and the elements that the user can mix with a packaging method in a single installer. For example, when the user is creating an installer that consists mostly of a single self-extracting package, it should be downloaded by some installation files as needed and on the basis that the user desires to keep the basic installer small but at the same location in the desires to install the large as well as the loss of a needed file in order to install files such as the optional component or even the database runtime engine for the users and the developers. If a certain file is being controlled by a component, then it can behave as a component package option, which is the default. It has been noted that a downloaded archive is not subject to the spending of the disc and they are always in a single part regardless of their size.
