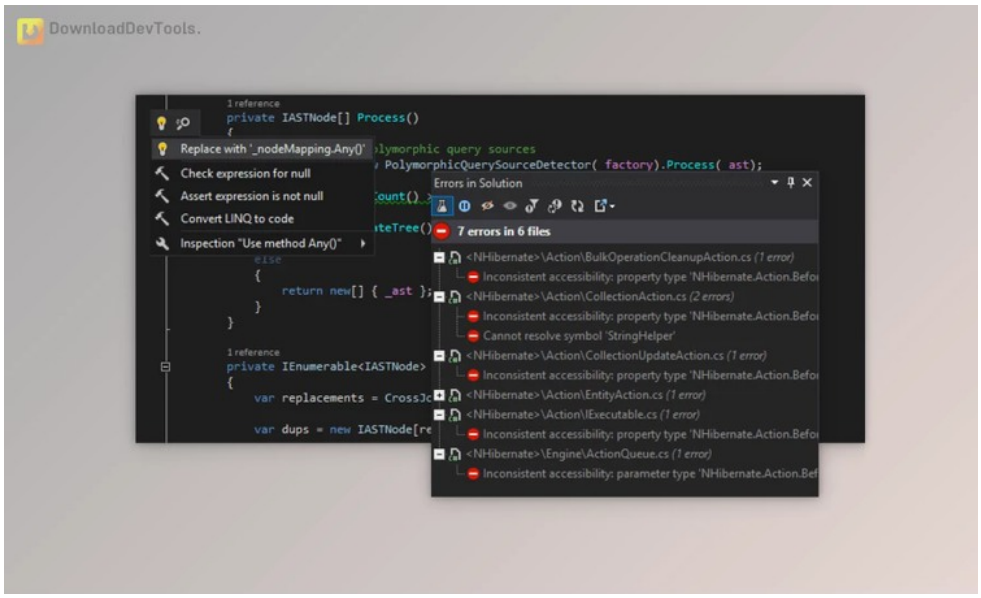
JetBrains dotUltimate v2025.2 (21 Aug 2025)

2025-08-31 01:53:55



JetBrains dotUltimate is JetBrains' all-in-one toolkit for .NET and C++ developers. It brings together a powerful set of tools that help you write better code, faster. Whether working in Visual Studio or using the Rider IDE, dotUltimate gives you advanced coding features, real-time code analysis, performance profiling, unit testing, memory optimization, and even code decompilation, all in one subscription.

At the heart of dotUltimate are tools like ReSharper (for smarter coding in Visual Studio), Rider (a fast, cross-platform .NET IDE), and ReSharper C++ (for powerful C++ development). You also get performance and memory profilers (dotTrace, dotMemory), a code coverage and testing tool (dotCover), and a .NET decompiler (dotPeek) to reverse-engineer compiled code. These tools help you avoid bugs, speed up development, and improve code quality effortlessly.

To top it off, includes JetBrains AI Assistant, which brings intelligent code help into your IDE. It can explain code, suggest improvements, write tests, and help you understand or refactor projects faster. Whether you're building desktop apps, web services, games with Unity, or enterprise applications, dotUltimate helps you do it better, all from a single, integrated suite.

Key Features of **JetBrains dotUltimate** :

1. **ReSharper** – Smart code analysis and refactoring tool for .NET in Visual Studio.
2. **Rider** – Fast, cross-platform IDE for .NET, Unity, Xamarin, and ASP.NET development.
3. **ReSharper C++** – Advanced coding, navigation, and refactoring support for C++ in Visual Studio.
4. **dotTrace** – .NET performance profiler to find slow code and optimize application speed.
5. **dotMemory** – Memory profiler for detecting leaks and optimizing memory usage in .NET apps.
6. **dotCover** – Unit test runner and code coverage tool for .NET with support for popular test frameworks.
7. **dotPeek** – .NET decompiler to view and export C# code from compiled assemblies.
8. **JetBrains AI Assistant** – In-IDE AI helper for explaining, refactoring, and generating code instantly.
