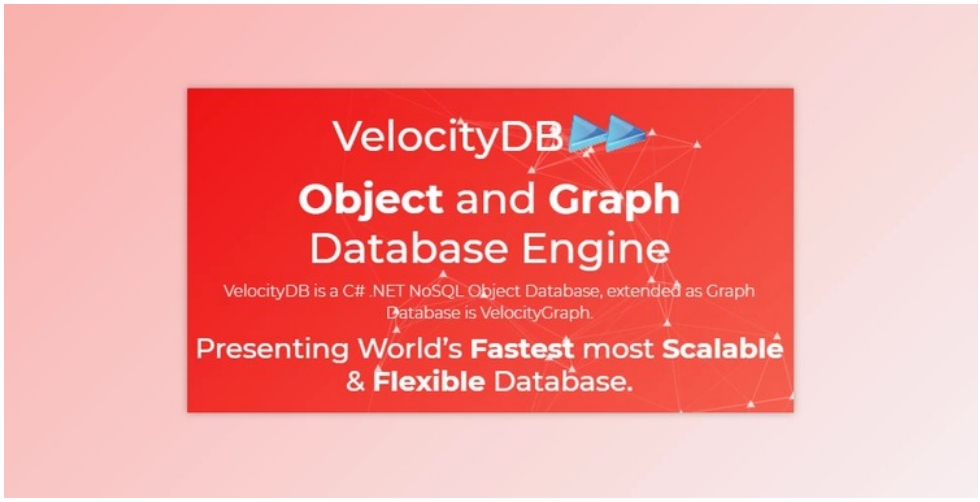
VelocityDB Embedded v11.1.1.0 (26 Jun 2022) for All Platforms

2025-02-02 16:10:53



Velocity DB Embedded is described to be an object database that permits the user and developer as well as the applications, the developers in order to come up with a data application unit, permits the user to save them, as well as the items in order to replicate or even alter the present things in order to produce new object within the object database program. The database is integrated with the programming language and permits the programmers and the users in order to keep consistency in the surrounding as well as the database system and the programming language has the ability to utilize the same version of the representation for the user and developer. Among the other advantages that are present, this design has the ability to remove the requirement for a clumsy mapping process, as well as a layer which is between the database version and the model of the program data. In order to be ultimately productive with the use of the abysmal database, these are required to purge the relational database and believes as well as thinks. It should be noted that the unstructured data can be managed with the use of the Velocity DB easily and flexibility and there are a lot of sample applications that are provided with the unstructured data which is downloaded. It is extremely scalable and has the ability to handle the applications that are small along with the small amount of persistent data as well as the application with the utilization of the trillions of object in size per session. The unlimited number of sessions are capable of being used to per application and the performance is described to be fantastic.

VelocityDB Embedded Great Features:

It has the following features and attributes that are stated as below such as:

- Velocity DB Embedded is very flexible and the database system has the capability to provide flexibility to the users and developers.
- The user has the ability to choose the structure which is possible data for the user application.
- It permits the user and developer in order to control the place of the data persistently and as to how it is indexed and accessed.
- With the help of the Velocity DB Embedded the user has the ability to have the ultimate tool for the process of persisting the data efficiently along with the performance which is unbeatable.
- It has the ability to provide data replication process with the automatic switches to a replica which is healthy.
- The process of encryption can happen and it is optional letter page level and can be controlled by the user for each and every database location.
