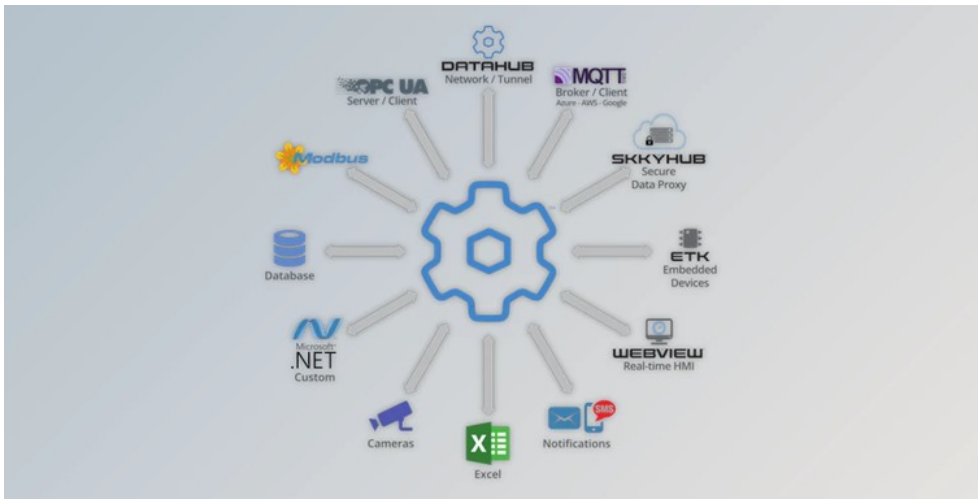
Cogent DataHub v8.0.5 Build 180413

2025-01-23 01:13:19



Make real-time, bidirectional links to OPC UA and timeless servers and clients. Join any SQL database, Modbus slave, Excel spreadsheet, custom apps, Microsoft Azure IoT Hub, Google IoT, Amazon IoT Core, some other typical MQTT customer or agent, and embedded systems.

Bring all of the information from all possible sources and some other protocol, into a single, unified data collection. Any chosen subset of the aggregated information could be retrieved by any customer with any supported protocol: OPC UA, OPC Classic, Modbus, MQTT, DDE, TCP, ODBC, HTTP, XML, and much more.

The DataHub® IoT Gateway™ flows real-time OPC UA and OPC DA industrial information into Manufacturing Execution Systems (MES), apparatus fires, and Big Data analytics programs. Connects OPC UA and OPC DA (Classic) servers and clients to some MQTT Broker, such as Azure, Google, and Amazon IoT.
Convert real-time, streaming OPC UA information to DA or vice-versa. Together with the Gateway, you can join any OPC DA server or customer to some OPC UA server or customer, locally or within the plant network.
The simplest, most dependable, and secure means to community OPC DA. No more DCOM hassles, no time-outs, supports proxies and may be configured as a proxy for improved safety.

Log your OPC information to SQL, MySQL, Oracle, or some other ODBC-compliant database, and query information from them also.
