Applications   Tools

IBM CICS Transaction Gateway is an interface for modernization in the enterprise using CICS assets. It enables various application platforms to integrate CICS, such as Java(r) applets, servlets, Microsoft(TM) .NET framework applications, and C and COBOL applications. CICS Transaction Gateway furnishes application developers with APIs and provides the most efficient administration features through JEE Application Servers.

CICS Transaction Gateway Desktop Edition gives single-user desktop access to CICS applications available in many client environments. Applications for clients can be developed with Java(TM), C, C++ COBOL, and COM using the .NET Framework and communicate via CICS Transaction Gateway Desktop Edition using an internal TCP/IP stack or interprocess communication.

IBM CICS Transaction Gateway Great Features:

Deploy and manage dockerized CICS TG Multiplatforms instances on the cloud of your choice, using a consistent deployment toolchain, and improving DevOps efficiency.

Use JavaScript Object Notation (JSON) web services without modifying existing environments to minimize risk and cost and retain high availability and scalability.

Connect virtually everything to CICS applications and servers with programming and deployment features for distributed platforms, including Java, Microsoft .NET, C/C++, C#, Visual Basic, and COBOL.

Exploit CICS high availability infrastructure and increased security with JSON Web Tokens (JWT), Secure Sockets Layer (SSL), identity propagation, and user authentication security.

Achieve end-to-end transaction tracking and performance monitoring with IBM Z Application Performance Management Connect (zAPM). Gain insight into active workloads and improve statistical proficiency.

Bridge the skill gap between UNIX/Linux, Microsoft Windows, Java-based application development platforms, and IBM Z® systems.

No changes to CICS applications and minimal CICS definitions are needed to achieve more excellent CICS connectivity.
