Dart PowerWEB File Upload for ASP.NET v4.0.3.2

2025-01-01 21:40:34

File upload for ASP.NET uses sophisticated Ajax methods that transfer data from a browser to the web server while reducing the server's memory footprint. The progress bars are animated each time a file is uploaded. Included are codes for each uploaded file in C# and VB. It lets you stream files to memory, disk, and any Stream interface for more advanced applications like a direct upload of files via the FTP server. In addition, the look as well as feel File Upload controls can be customized using specific fonts and images so that they seamlessly integrate into your website's style.

The File Upload component for ASP.NET is an assortment of components that utilize sophisticated Ajax methods to move files from a browser to the web server while minimizing server footprint in memory. Animation progress bars are shown for each file that is displayed in the ProgressPanel control.

Dart PowerWEB File Upload for ASP.NET Great Features:

- Compatibility with ASP.NET 2.0, 3.5, 4.0, 4.5
- Cross-browser support (IE, Firefox, Chrome, Safari)
