### Explore instant Color choices with gradient maps:

- The Shade Palette Exploration Tool for Photoshop that the Business Is Buzzing Around.
- Assess and Extract color palettes from a picture or selected part of a picture Using a Machine Learning based algorithm habit built into the board.
- Extract the Colour palette from pictures you are motivated by and use it on your personal picture.
- Pick from 1 To 10 color swatch samples to extract.
- Swatch samples Are coordinated in order of significance (luminance) mechanically, and consumer altered Palettes could be sorted by value immediately with a single click.
- Alter (or Shuffle) extracted colors mechanically to research minor changes to Palettes in varying levels based on user preferences (0-30), allowing for unlimited Color exploration.
- Move color swatches About to personalize your extracted palette before applying.
- Manually Alter any particular color swatch to further personalize your extracted color.
- Export your customized color palettes, and import custom color palettes from different users.
- Apply gradient Maps to your pictures automatically at user decided opacity settings from Extracted palettes with default mixing modes of"Soft Light", "Overlay" or"Linear Light" (3 of Nino's favored Blending modes for colorwork). Any other mixing mode could be chosen Afterwards too, as usual, in Photoshop.
- Employ as many Gradient maps as you need out of as many palettes as you need on any picture.
- The choice to Preserve shadows and highlights on your gradient maps from Preferences.
- Once created By ColourmapX, all employed gradient map adjustment layers could be further edited As normal in Photoshop.
- Save palettes As presets for later use, and every preset output using the preset name at the Made gradient map adjustment layer for simple viewing on your workflow.
- Works ideally on 8 and 16-bit RGB files.
- Quick, convenient, and Compact for ultimate creativity exploration.
- HTML5 native Photoshop UI panel: Intuitive and efficient, simple to Comprehend user interface Constructed for successful workflow.
- Multi-threaded and Vectorized code: The calculations are implemented to make the most of contemporary CPUs for a real-time experience.
